# A Thesis submitted to the Graduate School of the University of Wisconsin in partial fulfillment of the requirements for the degree of Doctor of Philosophy 

by
ROBERT EDGAR RIEGEL

Date JULY 17 , 1922

To Professors:

PAXTON
DG
FISH

This thesis having been approved in respect of form and mechanical execution is referred to you for judgment upon its substantial merit.

Approvedassatisfying in substance the doctor's thesis requirement of the University of Wisconsin: Cull Cimestl..tith.... Frederic A. Qg.g frudenie..d Major Professor

Date.....4.ely. 20....., 19.22

\text { Chapter I. Origins- Transcontinental and Local. } \\
\text { (To 1857). }
\end{gathered}
$$

The possibility of the construction of a transcontinental railroad furnished an interesting subject for speculation at a very early period. At a later time these speculations were put upon paper end claims were advanced as to the priority of thought. It was then pointed out that Dr. Samuel B. Barlow of Granville, Nassachusetts, had talked of a government railroad to the Columbia River as early as 1843, that Dr. Samuel Parker had made similar observations in the course of his western trip of 1835, that John Plumbe of Dubuque, Iowa, had called a meeting in 1836 with the same idea, that the American Railroad Journal had comnented on the plan in the same year, that Dr. Hartwell Carver had made a similar proposition in 1837 and that the subject had been discussed in Congress in the early forties. As nearly as may be estimated, these early discussions were based on little but imagination. The mere mechanical construction of such a line would would have taxed the ingenuity and resources of the engineers to

1. Accounts of early railraod ideas are extremely numerous, as for example, F. G. Young, "The History of Railroad Transportation in the Pacific Northwest," in The quarterly of Orezon Historicel Society, Vol. 12 (1911), pp. 186-8; I. H. Haney, Congressional History of Railway in the United States (Madison, 1910). pp. 402; R. S. Cotterill, "Early Agitation for a Pacific Railroad 1845-50," in Missouri Valley Historical Review, Vol. 4 (1918), pp. 396-404; Col. E. M. Poe, Report on Transcontinentel Railways, 1883 , in 48 th Congress, lst Sess., House Ex. Doc. 1, part 2, pp. 255-260. J. King, "John Plumbe, Originator of the Pacific Railroad," in the Annals of Iowa, Vol. 6 (1903-5), pp. 289-296 is an enthusiastic support of one claimant.
the utmost, while the revenue which could have been earned would 2
have been negligible.
The second phase of the agitation for a Pacific railroad opened with the conclusion of the treary of July 3,1844 , between 3 China and the United States. This treaty, drawn by Caleb Cushing, Eave the United States the same commercial rights in China that had been given to Great Britian by the treaty at the end of the Opium War. With this treaty new vistas were opened to the practical business man who had a touch of adventure and romance in his character. This was the situation of Asa Whitney, a New York merchant doing business in China. Combined with his business experience was a hopeful belief in the possibility of railroad construction and the desirability of Chinese trade, and when he returned to the United States he started to push his ideas 4 actively. For the next ten years Whitney untiringly kept his plan before the country, and the story of the development of the Pacific railroad idea is connected inextricably with the story of Whitney's life.

During the forties the various possible routes to the Pacific, and the methods of financing such a line gradually took
1855) 2. James Robertson, A Few Months in America (London, pp. 113, considered the project impossible at that date.
3. Compilation of Treaties in Force (Washington, 1898), pp. 93-95.
4. Whitney's earliest memorial to Congress was presented early in 1845.

definite shape, so that by 1840 De Bow's Review could list eight well defined routes, ranging from a line across Panama to a road from Lake Michigan to Oregon, and accredit each of these routes to the adrocacy of some particular man. The method of finance proposed was usually some form of government aid because very few people even considered the possibility of construction through entirely private effort. The usual proposals were that either the line should be built entirely by the government, or that it should at least be given a liberal subsidy in land or bonds, or both.

A second factor in the development of the transcontinental railroad idea in the forties was the territorial expansion of the United States. When Asa Whitney first proposed his plan in 1844 the hold of the United States on the Pacific coast was rery limited, so that he was forced by circumstances to adrocate a central terminus. By 1849 continental United States had expanded to approximately its present boundaries, thus greatly increasing the variety of possibilities of the western terminus of a railroad line.

The principal routes along which the trancontinental lines were later built were nearly all suggested during the forties. Professor Forshey (Louisiana), writing in De Bow's Review $Z$ in 1847 , advocated the southern route and credited his idea to
6. De Bow's Review, July 1849, pp. 1-39.
2. De Bow's Review, July 1847, pp. 475-495. The Chief advantages ciaimed were a better climate, a shorter route, and more population.

Robert Patterson and Colonel Gadsden, while Calhoun in an open 8 letter dated March 1848 supported substantially the same idea. Tennessee and Arkensas enthusiasts very naturally suppated the 9 thirty-fifth parallel route. T. H. Benton was the most prominent exponent of the central route and introduced a measure for 10
its construction in Congress as early as 1849. In the north, General Wilkes proposed a road to Oregon to be built entirely by 11 the government, while Asa Whitney continued his advocacy of a line to be built be a private company aided by a grant of land from the federal government. Throughtout the forties Whitney presented innumerable petitions to Congress, and found time to visit scores of public meetings and legidlative sessions in order to persuade them to the soundness of his views and to have them petition Congress in behalf of his plan. He also wis willing to write elaborate articles for any magazine that wes willing 12
to print them. When he went to England in 1851 it was rumored that he had a proposal to make to the English government on the 13 subject of a transcontinental railroad across Canada.

Some of the plans of the forties sought a compromise in

13. Prairie Herald (Chicago) Apr. 15, 1881 and June 24, 1851.
order to avoid sectional antagonisms, although this attitude is more characteristic of a later period. Dr. Hartwell Carver was willing to start his road anywhere that Congress might determine 14 upon, and proposed brances to both California and Oregon. Albert Pike proposed two roads - one from Lemphis and one from St. Louis, both to be built by a rather elaborate arrangement whereby the public land was to be used as a source of credit, and the 15 eventual control of the road was to be in the hands of the state. Beginning approximately about 1849, the idea of a Pacific railroad reached a third stage of development in which there was a general agreement that such a road would some day be built, and in which the opposition changed from a general objection to the plan as a whole to an opposition to particular phases of indivicual plans, and particularly the opposition of sectional interests. While the territory of the United States continued to expand during the forties the frontier continued to advance, thus creating more and more western population. This western population increased the difficulty of formulating a railroad plan which would be acceptable to the majority of interests, because each settlement considered itself the future metropolis of the west, and bitterly opposed any effort to have the terminus of the road elsewhere. One plan that was proposed to obviate some of the effects of local prejudice was to have the road built with a minimum of government
14. A Memorial for a private Charter, asked for by Hartwell Carver and his associates (Washincton, 1849).
15. National Plan of an Atlantic and Pacific Railraad and Remarks of Albert Pike (Iittle Rock, 1849).
aid, and possibly with none at all. 16

This idea was first ad17 vamed by such men as T. D. Judah and Josiah Perham, who proposed paying the cost of construction by the subscriptions of $a$ large number of small stock holders.

It was during the period beginning in 1849 that the first attempts were made to collect usable data on the subject of the topographical conditions of the western country in relation to railroad construction; earlier surveying and exploring expedi18 tions had not had this end in view. The surveys of 1848-9, as placed before Congress by Senate Resolution of July 8 , 1850 ,were made in the most part with the thought of a wagon road, but could be used for railroad purposes; in 1851 Brevet Major J. G. Bernard went over the Tehuantepec route with the avowed purpose of de19 termining its availability for railroad construction. The biggest piece of work done was the surveys made under Jefferson Davis as Secretary of War, which went over the various routes proposed for a transcontinental railroad in order to determine their comparative availability. Authorized in 1853, the final report was made in 1855 and filled ten large size volumes. The 20 route favored $w \in s$ the one along the thirty-second parallel.

19. De Bow's Review (Nov. 1851), pp. 515-517.
20. Reports of the Explorations and Surveys to Ascertain the most Practicable and Economical Route for a Railroad from the 1 ississippi River to the Pacific Ocean, in 33rd Cong. 2nd Sess., House Ex. Doc. 91, 10 vols. The conclusions are in Vol. I, p. 29.

The interest of the central government in the idea of a Pacific railroad is quite evident during the forties, and the surveying of the possible routes was only one of the ways in which that interest was manifested. In 1850 the first of the 21 state railroad land grants was passed and in 1852 provision was made for a hundred foot right of way for all railroads running 22 through the public domain. The Gadsden purchase of 1854 was consumated primarily in order to make possible the construction of a railroad along the southern route and the man whose name the purchase bears was greatly interested in railroad plans.

The question of a Pacific railroad was very closely linked with the territorial problem. Practically all western politicians were interested both in the question of a transcontinental railroad and in organizing the territories of the United States in order to provide for a further expansion of population. The relation between the two factors has excited a considerable amount of discussion recently, particularly in connection with the work of Benton and Douglas and their relation to the repeal 23 of the Missouri Compromise. No matter who was the real originator of the measure, it is evident that the territory question
21. See Chapter II for a discusssion of the land grants.
22. Congressional Globe (185l-2) Vol. 24, Part 3, p. 9.
23. Ray, Repeal and F. H. Hodder, "Genesis of the Kan-sas-Nebraska Act", in Proceedines of the State Historical Society of Wis. 1912, are the two chief worki on the subject. Hodder places the emphasis on railroad afitation and the attitude of Douglas, while Ray emphasizes the factional dispute in Missouri and the place of David Atchison.
and the route for a Pacific railroad were closely connected in the minds of men who were appe=ling for western support. $R$. $S$. 24
Cotterill has minimized this connection, basing his conclusions on the fact that the conventions which were called for the promotion of western railroads made practically no reference to the territorial problem. While there is considerable force to the idea, it would seem that the average westerner was satisfied that the route would be made available if it were really wanted, and was willing to let the actual mechanics of the proposition be dealt with entirely by Congress. The primary factor was to get a railroad, and to get it in the right place the rest was only a question of details. The probability of this point of view is emphasized by the fact that such men as Asa Whitney continued to petition Congress for aid for a railroad to the Pacific without touching the subject of territorial government, and that in 1850 his plans were reported favorably in both Senate and House, again with no mention of the territo25 rial question.

Probably the most outstanding feature of the transcontinental railroad agitation in the period after 1849 was the numerous large railroad conventions held all over the country. These conventions showed the increasing support which the idea
24. Cotterill, Early Agitation, p. 413.
25. Kitney's Railroad to the Pacific, in 3lst Cong. lst Sess., House Rpt. 140. Report of the Committee on Roads and Canals, in 3lst Cong. lst Sess., Sen. Rpt. 194.
was attaining, particularly in the west, and emphasized the sectional disagreement as to termini and route. This sectional disagreenent over termini and route was the one bis difficulty that it was found impossible to solve before the outbreak of the war. The generally accepted fundamental consideration were that only one line could be built and that such a line had to have government aid. This feeling placed the center of interest in Congress and as long as the sections were at all evenly balanced no action was possible.

The first of the large railroad conventions occurred at 26
Memphis in October, 1845, and .as interested only secondarily in 27
a railroad to the Pacific. J. C. Calhoun was president and in his opening address gave the keynote for the convention. He emphasized the improvement of southern transportation of all kinds, but spoke only briefly on a railroad for the far west, not because he was not interested in the project, but because he knew nothing about it. De Bow was probably the only prominent man there who was very keenly interested in western railroads, and the convention devoted but very little time to the subject.

The Chicago convention of 1847 provided a very close
26. Arkansas Gazette and Democrat (Little Rock) Mar. 4. 1853; De Bow's Review (Jan. 1846) p. 15; St. George S. Sioussat, "Memphis as a Gateway to the West," in Tennessee Historical Lagazine, Vol. 3 (1917-18), pp. 84-107 gives the best secondary account of the convention.
27. Sioussat, p. 107.
parallel to the Kemphis convention. Having been called because of Polk's veto of the River and Harbor Bill of 1846, it was interested primarily in the internal improvements of the northwest. A number of men were present, such as Thomas Allen and William Ogden, who later were very much interested in railroad construction, but little was said upon that phase of internal improvement. When the convention proper had adjourned Horace Greeley took the chair and resolutions were passed favoring the Wilkes plan of a government constructed railroad from the Missouri River via South Pass to the coast. The convention was particularly fortunate because of the publicity which it attained. Horace Greeley, who was strongly in favor of the Pacific railroad idea, reported it for the New York Semi-Weekly Tribune, while Thurlow Weed did the same for the Albany Evening Journal, and in both cases extensive accounts of the proceedings were published.

On October 15, 1849 the first of the big Pacific rail29 road conventions met at $S t$. Louis. Of the 900 delegates pres-

7 28. Chicago River and Tarbor Convention July 5, 6, and 7, 1847 (Chicago, l882) includes the more inportant work of the convention, its preliminaries, and the leading newspaper accounts. There is no adequate secondary account.
29. R. S. Cotterill, "The National Railroad Convention in St. Louis, 1849," in Missouri Historisal Review, Vol. 12(1918) pp. 203-215 is the best account. See also J. T. Scharp, History of St. Louis City and County ( 2 vols., Phila., 1883), Vol. 2, pp. 1143; Western Eagle(Cipe Girardeau), June 8, 1849, and Oct. 26, 1849. J. Ionghoorough, The Pacific Railroad and Telegraph (St. Louis, 1849) gives the ieads which the convention hoped to advance.
sent, seven hundred were from Missouri and Illinois, while ten other states had some slight representation. The composition of the convention turned into a personal contest between Benton and Douglas for control. Benton, who was just in the heat of the internal struggle in which he finally lost his senatorship, was beaten, and Douglas was elected president. The final resolutions adopted by the convention were rather ambiguous as to route, except that it should be from the Missouri River via South Pass to the coast, and that it should have three eastern termini - Chicago, St. Louis and Memphis. While Douglas expressed himself as being entirely in favor of the northern route the selection of termini was obviously a compromise. It proved, however, to be a compromise that pleased no one.

To counteract the influence of the $S t$. Louis Convention 30 a similar one was held a week later at Memphis. A delegation from the St. Louis convention was present, being headed by $J$. Loughborough, a St. Louis lawyer who had been in charge of the publicity work for the earlier group. Lieutenant Laury, who laid claim to having originated the idea of a southern road, was
30. R. S. Cotterill, "Memphis Railroad Convention, 1849 " in Tenneasee Historical Magazine, Vol. 4 (1918) pp. 83-94 is the best secondary account; De Bow's Review, Dec. 1849, pp. 550-2; Arkans:s Gazette and Democrat (Iittle Rock) Nar. 4, 1853. Railroad to the Pacific. Report of the Committee on Naval Affeirs, in $31 s t$ Cong., lst Sess., House Rpt. 439, includes the memorial of the Memphis convention and discusses the route proposed.
elected president, Asa Whitney was present as a visitor, and Jefferson Davis looked in for a while. The first action of the convention was to reject the St. Louis plan as presented by Loughborough. Just as the St. Louis convention had been divided between the Missouri and Illinois members, the Memphis convention was divided between the Tennessee and Mississippi delegations. In this case, however, there was no local dissension, and Tennessee won an easy victory, securing resolutions in favor of the southern route with Memphis as its terminus. Here for the first time the question of the territorial organization of the far west was raised and was included in a constitutional argument which looked forward to statehood for the whole area.

An interesting solution for the sectional issue as it was re-emphasized in the St. Louis and Memphis conventions was presented by Albert Pike shortly after the Memphis convention 31 adjourned. He regretted that the Memphis convention had not been more diplomatic in its action and wished that instead of entirely rejecting the St. Louis idea it had presented an alternate compromise plan. He argued that neither section had the right to construct a transcontinental railroad entirely within its own limits and that the St.Louis convention was not fair, insomuch that it gave two branches to the north and only one to the south. As an alternate plan he proposed two com-
31. National Plan of an Atlantic and Pacific Railroad and Remarks by Albert Pike (Little Rock, 1849).
plate lines; one from St. Louis and one from Memphis. Pike's plan was open to many serious objections, but it at least had the merit of stating the sectional issue frankly and trying to meet it equitably.

During the succeeding years numerous conventions were 32
held at various places throughout the country, all advocating some particular plan for the construction of a transcontinentail railroad. Probably the most notable of these was the con33
vention at Philadelphia April l-3, 1850, which included most of the regular railroad enthusiasts - Ogden, Loughborough, Degrand, Whitney, etc., resolutions were adopted favoring the plan of the St. Louis convention. All these conventions indicated a growing public sentiment, particularly in the west, and served to emphasize the sectional difficulty of route. Practical ifficulties of other kinds were being overcome during the fifties, but the question of terminus was found impossible of solution prior to the Civil War. By that time the concept of a trans-
32. Some of these conventions were held at New Orleans in 1851 - Arkansas Gazette and Democrat (Little Rock) Aug. 8, 1851; at New Orleans in 1852-American Railroad Journal (New York), Vol. 25,p. 33, Gezette and Democrat Jan. 30,1852, De Bow's Review Vol. 12, pp.30 $\mathbf{g}^{-332 ;}$ at Memphis in 1853- De Bow's Reyierr Vol. I5 pp. 254-274, at Little Rock in 1853 - Gazette and Dem. June 17, 1853; at Charleston in 1854 - Am. R.R. Jour., Vol. 10 , p.259. A similar but smaller meeting was held at Boston in l849Proceedings of the friends of a railroad to San Francisco at their public meeting, held at theU.S. Hotel in Boston. Apr. 19,1849, (Boston, 1849).
33. Proceedings of the Convention in favor of a National Railroad to the Pacific Ocean (Phil., l850) gives a complete report. See also J. Y. Scammon, Zillion B. Ogden (Chicego,1882); Western Eagle Apr. 5, 1850; Am. R.R. Journ. Vol. 23, pp. 228-231; Prairie Herald Apr. 24, 1850.
continental railroad was failiar and most of the obstructions to its building had been removed.

Although the western railroad conventions of 1849 and following did not immediately accomplish their specific purpose, they had a very appreciable indirect effect in stimulating the construction of local roads. Very naturally the first state to be able to undertake railroad construction was the oldest and most populous - I⿰氵ssouri. As early as April, 1836, a convention hed been called at $S t$. Louis for the purpose of furthering 34 the movement for internal improvements; among other things, railroads were discussed and various routes proposed. The project was continued during the following winter, when the legislature chartered eighteen railroads, all short lines projected to con35 nect the large county towns and river ports. In 1838 a Board of Internal Improvements was created as a supervisory body, but it was abolished in 1845 before it had any railroads to super36 vise. It should be noted that this early agitation was distinctly premature and local in its character. The roads were not adrocated as a complete system of communication in themselves but as on adjunct to water transportation.

36. Violette, p. 79.

The eastern railroad development cluring the fifties, when the western roads were getting their first start, had certain very definite characteristics. It was during this period that the future eastern trunk lines were consolidating the eastern links of their roads, and standardizing the gauge. Prior to the Civil War no gauge had been accepted as standard and at least seven different widths, ranging from three feet six inches to 37 six feet, were in common use. The Pacific Railroad of lissouri was built with a five feet six inches éage and changed to standard(four feet eight and a half inches) after the war. In 1850 no rialroad had as yet reached the Mississippi, and no bridge crossed the stream below St. Paul. The Chicago and Rock Island (later C. R. I. and P.) reached the lississippi in 1854, the Galena and Chicago Union (later C.and N. W.) and the Chicago and Alton in 1855 , and C. B. and $Q$. and the $I . C$. in 1856 , the Milwaukee and Mississippi and the Ohio and Mississippi in 1857 , 38 and the La Crosse and Milwaukee (later C. M. and St. P.) in 1858.
37. Am. R.R. Jour. Vol. 9, F. 405, listed some of the more important gauges and showed where they were used.

Williams, "A History of the City of St. Paul and the County of Ransey", in Collections of the Minnesota Historicel Society, Vol. 4 (1876) p. 253, describes the opening of the P. \& R.L.; E. D. Neill, The History of Minnesota from the Earliest French Exploration to the Present Time (Phila., 1858) pp. 595-607, describes the same; Weekly Minnesotian (St. Paul)Apr. 2к, 1857 - Hilwaukee and Mississippi; F. R. Holmes, Kinnesota in Three Centuries (4 vols., Nankato, 1408)the La Crosse \& Milwaukee; S. H. Smith, The Book of the Great Railway Celebration of 1857 (N.Y., 1858) describes the opening of the line to St. Louis.

The first bridge across the river was built in the middle fifties and the second one came a decade later. Consequently, When the first lines were begun in Missouri they made no connection with eastern lines. Not until after the Civil War was it possible to avoid re-shimment across the Mississippi River.

Early in 1849 Benton introduced his resolution for a Pacific railroad in Congress, end about a month later (March 12, 1849) the Pacific Railroad of Kissouri was chartered by the 39
state. In October the St. Louis convention met, and in the following January the company was organized with Col. John O'Fallon as president (succeeded later in the year by Thomas Allen). Books were opened, Kirkwood, formerly of the New York and Erie, 41 wes hired as chief engineer, and surveys were started. From the very beginning the financial outlook was unpromising. Lucas, O'Fallon, and Page subscribed one hundred thousand dollars be42
tween themselves, St. Louis added another one hundred thousand 43 dollars, and other individual and county subscriptions raised the total to one million one hundred and fifty-eight thousand 44 dollars by l851. This amount was not all immediately avail-

able, and in all probability a good share of it could never be collected. In view of these circumstances Thomas Allen, who was both president of the railroad and chairman of the Senate Comnittee on Internal Improvements, eppealed to the legislature 45 in January, 185l, for state aid. No serious opposition developed and during the following month the legislature loaned the corspany two million dollars of state bonds on the security of 46
a first mortgage. The compeny immediately let contracts for 47 the first part of the road, and actual construction started July 4, 1851, when Mayor Kennett of St. Louis broke the first 48 ground.

In the mean time petitions had been sent to Congress as early as 1849 for aid from the federal government, and on June 10, 1852, the law giving a land grant to the Pacific Railroad 49 and to the Hannibal and St. Joseph was signed by the president. In the fall of the same year the first iron arrived from England 50 and the first engine from Taunton, Massachusetts, and on December 23 , 1852, the first trans-Mississippi railroad was put into operation as far as Cheltenham - five miles - with a tremendous

51
celebration. On the same day the legislature voted another one 52
million dollars for the furtherence of the project.
53
During 1853 the road was opened to Franklin (later Pacific), but during the remainder of 1853-4 no new line was finished, although the second division was put under contract. In 1855 54
the line was opened to Hermann, and an additional loan of two 55
million dollars was voted by the legislature. Due to this aid 56 the road was opened to Jefferson City early in 1856. In March 57 1857, came the last of the state aid, but in spite of this assistance the financial condition of the road was so poor that no additional line was opened in the next three years.

The Northern Missouri was the second Missouri railroad to start construction. Chartered March 3, 1851, it was projected to run from St. Louis to St. Charles, and from there along the dividing ridge between the Mississippi and Missouri Rivers 58 to the Iowa state line. Granted aid by the legislature to the extent of two million dollars on December 23, 1852, two million

Shelbina, and three miles had been built east from St. Jo. The Platte County Railroad was chartered February 24, 1853, to con68 tinue the western end of the line north from St. Joseph, but nothing was done before the panic of 1857.

The St. Louis and Iron Mountain was chartered March 2, 1851 to build south from St. Louis as part of a projected St. 69
Paul-New Orleans line. It was aided by three million six hundred thousand dollars in state bonds, the first of which came in 1853 and enabled the company to start construction in the 70
fall of that year. In 1855 rolling stock and rails were se71 72 cured and in 1856 two miles of track were laid. By the end of 1857 the road had reached Bismarck, 8 distance of seventy-nine 73 miles.

The South West Branch of the Pacific Railroad was chartered December 25, 1952, as a part of the original line of the Pacific Railroad, and was to extend from Pacific Junction on the main line southwest toward the Missouri boundary, with the hope

74
of eventual transcontinental connections. Aid was received from the state in 1852 and 1857, contracts were let in 1854 , and 77 in 1855 the work was started at Pacific. Progress was very slow and none of the road was open for traffic by the end of 1857.

When the panic of 1857 occurred Missouri was well started on a comprehensive system of railroad construction. Four lines had been partially built and construction was under way on a fifth. Three of the roads formed possible links in future transcontinental systems, while the other two were projected essentially as feeders, and ran north and south.

In Texas, the next state to possess railroads, the early history was somewhat different. The earliest railroad agitation in Missouri had been on the basis of supplementing the system of waterways, but when it was revived in the latter forties the idea had been changed to that of an entirely independent and complete system in itself. Texas, on the other hand, continued throughout the fifties to hold the idea of railroads as an auxiliary to water transportation. The idea was to build lines on a tangent from the coast so as to tap as much of the country and as much of the river traffic as possible, collecting the products at some central Gulf port for shipment. While the transcontinental idea was present it played but little part

in the actual construction.
As far back as December 16, 1836, the Republic of Texas had chartered the Texas Railroad, Navigation, and Banking Company, with banking privileges and the right to construct a road 78 or canal from the Rio Grande to the Sabine River. Nothing was done on the project, and in 1838 the scheme was greatly reduced by the chartering of the Galveston and Brazos, with the right to 79 build a railroad or turnpike from Galveston to the Brazos River. No aid was given, no banking privileges allowed, and the Republic was to have the right to fix the rates. In 1840 the charter was amended to allow the construction of canals instead of 80 turnpikes, but the privilege ran out before any action was taken.

The project that eventually materialized was begun with the charter (January 26, 1839), of the Houston and Brazos, which allowed that road a free right-of-way through the public domain. No work was done under this incorporation, but in February,1840, A. Briscoe started work on the line without a charter, as the 82 Harrisburg and Brazos Railroad Company. A charter was secured January 9, 1841, under the name of the Harrisburg Railroad and

Trading Company, but work was soon discontinued becsuse of the 84
fear of Mexician raids. When conditions were again near normal all the property was bought by Sidney Sherman and his associates (1847), and re-chartered February 11, 1850, as the Buffalo Bayou, 85

86
Brazos, and Colorado. Work was started in 1851 and the first 87 rails were laid in 1852, although the road was not opened for traffic until August, 1853, when operation was begun between 88 Harrisburg and Stafford's Point, a distance of twenty miles. 89 In 1854. Texas passed a general land grant act and by December, 90 1855, the road had arrived at the Brazos River, at which point it remained until after the panic.

The Galveston and Red River was organized in 1848, but nothing was done until January 1, 1853, when Paul Bremond threw 92 the first shovelful of dirt at Houston. The road was really a Houston project, and in 1856 the name was changed to the Houston 93 and Texas Central. The contractors soon got disgusted and threw 24-27.

up the job, whereupon Bremond took over the work himself, and was able to complete twenty-six miles during 1856 and twenty 94
more during 1857.
The Galveston, Houston, and Henderson was chartered Feb95
ruary 7, 1853, to connect Galveston and Houston, and proved to be the only railroad to reach Galveston before the seventies. 96
Twenty miles were completed in l857, while the whole road was 97 finished in 1858. The bridge to Galveston was completed in 98 1859. Another connecting road was the Houston Tap Railroad, chartered January 26,1856 , to connect Houston and Harrisburg, the termini of the Houston and Texas Central and the Buffalo 99 .
Bayou, Brazos, and Colorado. The road was built by a one per cent property tax levied by the city of Houston, and was com100 pleted (seven miles) in the same year that it was chartered.

The transcontinental idea hardly got outside of the realm of theory in Texas. In 1853 the Mississippi and Pacific was given a land grant for the purpose of constructing a trunk line from the Arkansas border to El Paso, and this grant was secured by the reservation of a considerable area of land near El

101
Paso. Other roads were later given a chance at the propositionthe Remphis, El Paso and Pacific, the Southern Transcontinental, and the South Pacific, but none of them succeeded in getting the 102 road built.

By 1857 Texas had really only two lines of railroad, one nprth from Galveston and the other west from Houston. Railroad enthusiasm was widespread, but no very definite ideas had been developed either by individuals or by the state. Other roads had been chartered, but in every case except that of the road from Corpus Christi, the lines radiated from Houston and reflected the enthusiasm and energy of that city more than anything else. The greatest drawback was the lack of population in Texas, so that the railroads were valueless even if built. This condition continued to exist for a considerable length of time, and a great part of the Texas railroad milesge was built later by roads looking for either an outlet on the Pacific coast or on the Gulf.

In Arkansas there occurred during the fifties the spectacle of a population that was energetic and enthusiastic, but that lacked the resources to carry out its ideas. All the

102. The best summary is in Poor's Manual 1878, p. 859; the Kemphis, El Paso and Pacific was discussed in the sub-committee of the Pacific Railroad Committee, and the committee report on the validity of the road's claims to its title and land may be found in 41 st Cong., 2nd Sess., Senate Rpt. 212; the minority report is in $41 s t$ Cong., 2nd Sess., Sen. Mis. Doc. 121. The correspondence concerning the French advertising claims of the road may be found in $41 s t$ Con., 2nd Sess., Sen. Ex. Doc. 59. The other roads were not as active.
southern railroad conventions were liberally supplied with mem103
bers from Arkansas, and every Arkansas newspaper was filled with 104 railroad aspirations and hopes. Unfortunately Arkansas had a rather meagre population and was burdened by a large debt contracted in the banking enthusiasm of the thirties. Consequently there was little capital, either private or public, to be invested in railroads, and there was very little hope that a railroad could be made self-supporting after it had been built.

The principal routes suggested for railroads centered at Little Rock - lines between Little Rock and individual river towns, north and south as part of a through line, and west to Fort Smith. The best possibility was that of a line from Memphis to Little Rock, connecting two good-sized cities, and with the possibility of eventually becoming part of a transcontinental road. Various roads were chartered separately until 1851, 105
when a general incorporation law was passed. Congress aided Arkansas railraods in 1853 by a land grant which provided for a line from Cairo, Missouri, via Little Rock to a point on the southern boundary of Arkansas in the direction of Fulton, Texas, 106 and a line from IIemphis via Little Rock to Fort Smith. In spite

of this aid no road was put into operation before 1858. The Memphis and Little Rock had started work by that time, but none 107
of the road was open for traffic.
Iowa was the only state in the first trans-wississippi tier that did not at any time afford state aid to its railroads. The tendency was rather in the other direction, and even local bond issues were restricted. Iowa was able to adhere to this policy in large part because of its geographical position;lying directly west of the territory tributary to Chicago, the principal railraods centering at Chicago all pushed west through Iowa, and this tendency was later emphasized by the building of the Union Pacific with its eastern terminus at Omaha.

Shortly after the st. Louis convention, Iowa held a ri108
val convention at Iowa City. Ex-Governor Lucas of Ohio presided, and resolutions were adopted asking for a land grant for a road along the river from Dubuque to Keokuk, and also for one from Davenport to Council Bluffs, to form a link in a future transcontinental route. Although no action was taken by Con109 gress until 1856, the convention crystallized sentiment and gave an impetus to the chartering and building of local roads. The

principal routes suggested were those running directly west across the state from various river towns several north and south roads, such as from Keokuk to Des $\operatorname{INoines}$ and Davenport were also proposed.

The first road to be built was the Davenport and Iowa City, chartered October $14,18: 50$, to run along the general route 110
proposed by the convention of 1849. In 1853 the franchise was bought by the Nississippi and Kissouri, which was a Chicago and Rock Island company, chartered to continue the main line across 111
Iowa. Surveys were made under the direction of Peter Dey and 112 G. M. Dodge, and books were opened. No bonds were issued, the company claiming that they were not a legitimate source of in113 114 come. In the fall of 1853 actual construction was started, an agreement was made with the $\mathcal{C}$. and $R$. I. for the construction of 115
a bridge across the Mississippi, and branches north and south 116
from Davenport were authorized. In $185!$ the road was finished

from Davenport to Muscatine and in 1856 from Davenport to Iowa 118
City, which remained the western terminus of the main line until 1860.

The bridge across the Mississippi was built by agreement between the Chicago and Rock Island, the Mississippi and Missouri, 119 and the Railroad Bridge Company of Illinois; consequently it had no authorization either by Iowa or by the United States. The work was finished in 1856 and constituted the first bridge across 120 the $\mathbb{M i s s i s s i p p i}$ below St. Paul, and being comparable in an engineering way to the Niagara Suspension Bridge which was finished by Roebling in 1854. Imiediately upon the completion of the bridge one of the spans was destroyed by fire caused by a steamboat collision. This accident was the starting point of an almost interminable amount of litigation, to determine whether any line of railroad had the right to obstruct river traffic in such a fashion, and whether this particular road had sufficient authorization. Although the railroad eventually won its case as to the damages accruing because of the loss of the boat, a Unit-

ed States law was required to end the trouble completely, and the extended litigation was an important factor in the later bankruptcy of the road.

Another of the transcontinental projects was the Burlington and Missouri River, organized in 1853, to run from Burlington 121 to the Hissouri river opposite the Platte. Being one of the recipients of the land grant of 1856 it started construction in that 122
year, but was met by the panic before it had any track open for operation. The C.B. and Q. acquired an interest in 1857, and eventually made this a part of its main line accoss Iowa.

The Iowa Central Air-Line was projected (1853) as another possible transcontinental route, and had its terminus at Sabula 124
on the $\mathbb{H i s s i s s i p p i ~ R i v e r . ~ T h i s ~ r o a d ~ w a s ~ o r g a n i z e d ~ p r i m a r i l y ~ t o ~}$ 125
secure the benefits of a possible land grant; no work was done, and the land grant that was received was finally transferred to 125
the Cedar Rapids and Missouri River.

line was built before 18¢7, it eventually became a part of the main line of the $C . \mathbb{M}$. and St. Paul.

One north and south road was able to start building by
1857. The Keokuk, Ft. Des Moines and Minnesota was organized in 1853 as the successor of the Des Moines River Improvement 136 137
Company. Grading was started in 1855; the first rails were laid 138
at Keokuk in 1856, and by 1857 the line was in operation as far 139
as Bentonsport (thirty-nine miles), where it stayed until 1860.
Railroad enthusiasm was exceedingly strong in Minnesota
 the condition of the country was such that practical railroad construction was almost an impossibility. Minnesota was still a territory, with a rather small and scattered populetion; capital was hard to obtain. A railroad, even if built, would probably remain unproductive for a number of years. Several of the roads that were chartered actually started work before the end 140 of 1857, being encouraged by the federal land grant of that year. Unfortunately this help came just at the time of the panic, and

140. See discussion in Chap. II.
with the two influences acting in opposition nothing was accomplished. The principal routes sugcested were those radiating from St. Paul and Minneapolis, and those running due west from such eastern points as Duluth, Winona, and La Crosse.

Of the states and territories further west only California was in a position to meke railroad construction possible, and even here it was only in connection with the mining industry that such a line could be made profitable. The Sacramento Val141
ley Railroad was organized fugust 4,1852 , and after surveys by 142 143 T. D. Judah, started to build east from Sacramento in 1855. On November 10, 1855, occurred the first excursion on the first farwestern railroad; passengers were carried from Sacramento to Pat144 terson (ten miles) at a cost of ten dollars. Early in 1856 the road was completed to Folsom, which remained its terminus until 145 1860. This was the only line to be built west of the lifssouri river before 1857.

The early fifties was a period of great railroad enthu-

siasm in the west. As was generally true in the history of western railroads, the construction went in advance of the economic ability to pay for their building and support. The factors played a leading part in the situation, - (1) the geographical situation of the country, its resources, end the comparative need for better transportation, and (2) trie activity of the government in encouraging construction. The railroads of Texas and Missouri received liberal government aid of various kinds, while the one in California and those in Iowa had reasonable expectations of paying dividends in the near future. The other states had neither of these hopes, and consequently railroads were not constructed.

Chapter II. Government Aid - National, State and
Locel (1850-1876), and Railroad Construction,
1857-65.

The most outstanding difficulty of western railroad construction was financial. Very little capital existed west of the Hississippi, and consequently it was necessary to secure eastern or foreign help. Railroad stock and bonds were sold in the east, but usually the price was so low that the transaction proved unprofitable. The only other way of obtaining adequate funds was to get some kind of government aid - national, state, or local. Fundamentally, this was only an additional means of securing eastern capital; state or local bonds were sold in the east, and a land grant from Congress was either sold to settlers coming from the east or else mortgaged and the bonds 1 sold in the east.

The question of Congressional land grants has been adequately discussed elsewhere, and there is no necessity of going 2
into detail on the subject. After a rather desultory practice, 3
Congress started a regular policy in 1850 of granting land from the public domain for the development of state railroad systems. The following list shows the grants made to the states west of

1. Stow, Cap. Guide 1859, pp. 9-10, gives a very good discussion of the usual methods of financing western railroads.
2. J.B. Sanborn, Coneressional Grants of Land in A.id of Railroads (Kadison,1899) is the best and most complete account; J.H. Haney, Congressional History of Railways in the United States 1850-1887 (Madison,1910) also deals with the subject.
3. The grant to Illinois for the Illinois Centrel.
the Mississippi, and also shows the road which was the recipient,Misexuri, June 10, 1852.

Hannibal and St. Joseph - Hannibal to St. Joseph.
Pacific Railroad of Missouri - St. Louis to the western boundary of the state (at Kansas City).
Missouri and Arkanses, February 9, 1853.
Cairo and Fulton - Kississippi River, opposite the mouth of the Ohio, to the Texas boundary near Fulton.

Memphis and Little Rock - Memphis to Little Rock.
Little Rock and Ft. Smith - Little Rock to Ft. Smith. 6
Minnesota, June 29, 1854.
Kinnesota and Northwestern - St. Paul to the eastern boundary of the state in the direction of Lake Superior.

Repealed August 4, 1854, for non-compliance with the terms.

Iowa, Hay 15, 1856.
Burlington and Missouri River - Burlington to the Missouri River near the mouth of the Platte.

Kississippi and Kissouri - Davenport via Iove. City and Ft. Des Moines to Council Bluffs.
4. Session Laws, 32nd Cong., lst Sess., Chap. 45,pp. 8-
5. Ibid., 32nd Cong., 2nd Sess., Chap. 59, pp. 155-156.

7. Statute at Large, Vol. 10, p. 575.
8. Session Laws, 34 th Cong., lst Sess., Chap. 28, pp. 9-10.

Iowa Central Air-Line - Lyons City northwest to the Iowa Central Air-Iine near Maquoketa and then along the forty-second parallel to the Nissouri River. Dubucue and Pacific-Dubuque to Lifissouri River, with a branch from Tet des Mortes directly to the main line.

Minnesota, March 3, 1857.
Minnesota and Pacific - Stillwater via St. Paul and St. Anthony to a point between the foot of Big Stone Lake and the mouth of the Sioux Wood River, and a branch via St. Cloud and Crow Wing to a navigable point on the Red River.

Southern Minnesota and Minnesota Valley - St. Paul and St. Anthony via Minneapolis to a junction west of the Mississippi, and from there to the southern boundary of the territory in the direction of the mouth of the Big Sioux River.

Minnespolis and Cedar Valley - branch of the preceding road to run via Faribault to the northern boundary of Iowa est of range 16.

Transit - Winona via St. Peter to a point on the Big Sioux River south of the forty-fifth parallel.
9. Session Laws, 34the Cong., 3rd Sess., Chap. 99, pp. 195-197.

Root River Valley and Southern Minnesota - La Crescent via Target Lake, up the valley of the Root River to a junction with the last named road east of range sixteen.

All these gronts provided for alternate sections of land, six sections in width, with the privilege of indemnity selections within a radius of fifteen miles. Ten years was given to each company to construct its road, and at the end of that time the land was to revert to the public domain if the line was not finished. In practice the time limit was continually extended, and the Supreme Court finally held, in the case of Schulenburg $\nabla$. Harriman, that a special act of Congress was necessary in 10 order to restore the land to the public domain.

This first group of western land grants took care of the first tier of trans-Mississippi states, and contained the basis for an adequate system of transportation for each one. In Texas the land was the property of the state, being retained upon its admission to the Union. Texas had a general land grant law, comparable to the Congressional grants, but the subject will be treated under the topic of sta.te aid.

The fifties marked the peak of the confidence in railroads as the panacea for all economic ills. The panic of 1857 was due in great part to the over-speculation in railroad se-
10. 21 Wallace 44.
11. Banker's liagazine and Statistical Register (New York, Vol. 12 (1857), p. 390.
41.
curities, and furnishes an interesting parallel to the banking panic of l837. The final crash sobered the people for the time being at least, and when Congress revived its land grant policy in 1862, it was no longer with the idea of furnishing every new state with a complete land-grant railway system. While the land that was granted did not lessen in emount, it was usually given for the aid of a specific, strategic line, and very often it was made directly to the company by name. Another phase of the later policy was the increased favoring of transcontinental lines. While the grants of the fifties made provision for possible transcontinental roads, the later grants had them specifically in mind, and several of the grants were made transcontinental in scope - running through several states and territories. The grants made after 1857 are as follows, 12
Pacific Railroad Grant July l, 1862.
Union Pacific - From looth meridian between the south margin of the Republican River Valley and the north margin of the Platte River Valley (Nebraska) to the western boundary of Nevada, Also from a point on the western boundary of Iowa to the first mentioned point.

Leavenworth, Pawnee, and Western - Missouri River, at the mouth of the Kanses to a connection with the Union Pacific at the looth meridian.

Central Pacific - San Francisco via Sacramento to the
12. Statutes at Large, Vol. 12, Chap. 120, pp. 489-498.
eastern boundary of California, with the right to continue its line to meet the Union Pacific. Hannioal and St. Joseph - St. Joseph via Atchison to connect with the Union Pacific.

Sioux City to a connection with the Union Pacific; to be give to the first line reaching Sioux City. The Sioux City and Pacific fulfilled the terms and received the grant.

This act provided for the odd sections within ten miles of the road, with no indemnity. The emount was doubled by the act of July 2, 1864. 13
Kansas, March 3, 1863.
Leavenworth, Lawrence and Galveston - Leavenworth via Lawrence and the Ohio City crossing of the Osage River to the southern boundary of the state in the direction of Galveston Bay; also a branch from Lawrence along the valley of the Wakarusa River to where the Atchison. Topeka and Santa Fe intersects the Neosho River.

Atchison, Topeka, and Santa Fe - Atchison via Topeka to the western boundary of the state in the direction of Et. Union and Santa Fe.

Union Pacific, Southern Branch (later Missouri, Jansas, and Texas) - Branch of the above road from the
13. Statutes at Large, Vol. 12, pp. 772-774.

Neosho River crossing down the Neosho Valley to a junction with the Leavenworth, Lawrence, and Galveston.

Minnesota, May 5, 1864.
Lake Superior and Mississippi - St. Paul to the head of Lake Süperior. 15
Iowa, May 12, 1864.
Sioux City and St. Paul - Sioux City to the southern line of Minnesota.

McGregor to western boundary of state - built by
McGregor Western - McGregor to Calmar.
McGregor and Sioux City - no construction.
McGregor and Missouri River - Calmar to Algona.
C. M. and St. Paul - Algona to Sheldon. 16
Nebraska, July 2, 1864 - amendment to act of 1856.
Burlington and Missouri River - Nebraska line on Missouri
River south to the mouth of the Platte, and to a
connection with the Union Pacific not further west
than the 100 th meridian.
17
Northern Pacific, July 2, 1864.
Lake Superior west by most elisible route to Portland.

23. Same as preceding references.
24. Statutes at Large, Vol. 14, pp. 292-299.

This act is a part of the preceding one, but while the California and Oregon Railroad was designated by name, the part of the grant that lay in Oregon was given to the state to dispose of as it saw fit. 24
Atlantic and Pacific Railroad, July 27, 1866.
Springifled, Kissouri via Albuquerque and headwaters of the Colorado Chiquito along 35th parallel, and across the Colorado River at the most suitable point to the Pacific coast; a branch from the Canadian River to a point at or near Van Buren, Arkansas.
(The western part was taken up by the Southern Pacific).

25
Stockton and Copperopolis, March 2, 1867.
Stockton to Copperopolis, California.
Oregon Central, May 4, 1870.
Portland to Astoria, and from junction near Forest Grove to Yamkill River near McMinville. 27
Texas and Pacific, March 3, 1871.
Marshall, Texas along 32nd parallel to El Paso and from there by the most eligible route to the Colorado River near the southeastern boundary of California, and from there to San Diego. (The western part was taken over by the Southern Pacific).
24. Statutes at Large, Vol. 14, pp. 292-299.
25. Statutes at Large, Vol. 14, p. 548.
26. Statutes at Large, Vol. 16, pp. 94-95.
27. Statutes at Large, Vol. 16, pp. 573-579.

It may easily been seen that the land grant policy had changed from the earlier period. The only state to receive anything similar to the old land grants was Kansas, while other states such as Oregon and California received only desultory gifts. Four of the grants were in favor of transcontinental roads, and the remainder were mostly additions to grants already given. By 1871 the period of the land grants was over, and the agitation for the repeal of the former acts was getting into motion. In a general way this feeling corresponds to other local railroad agitation, and shows the passing of the locally owned and supported railroad. The financial method that was used generally meant that within from ten to twenty years the control of the road would pass to the east. The stock might be bought up, the road might be leased, or the eastern bondholders might foreclose and secure control of the stock through reorganization. Frequently the control of the road passed to an eastern construction company during the process of building. This seemingly inevitable tendency was a great factor in alienating local support and in encouraging local anti-railroad agitation. The western farmer or small business man had a very normal antipathy to the control of his means of transportation by a foreign corporation, particularly if that corporation had secured control through bankruptcy proceedings which had squeezed out his own holdings. It is a very evident fact that in most of the western states the anti-railroad feeling becane particularly strong from fifteen to twenty years after the first railroads were built, thus probably
showing more than anything else the normal working out of the financial system in use.

The second great source to which the railroad looked for aid was the state. In all of the first tier of trans-Mississippi states, with the exception of Iowa, there were experiments in state aid during the two decades of 1850-70. As has been pointed out before, these attempts were only a further way of securing eastern capaital. Aid was always given in the form of state bonds, and constituted a first mortage on the railraods aided. With the double backing of the railraod and the state government the bonds were sold in the east, and again it was eastern capital that was being used.

Missouri was the first of the western states to start a 28 policy of state aid. Backed by a fairly large and prosperous community, and with no other debt to act as a drawback, it was in the most favorable possible position for the experiment.

Starting in 1851 state bonds, constituting a first mortage on 29 railroads to which they were issued, were authorized -
28. J. W. Million, State Aid to Railways in Missouri (Chicago, 1896) gives the standard account of the Missouri state aid experiment. The material is accurate, and the work generally satisfactory.
29. The amounts of state aid are given in Million (Appendix) pp. 232-243; Stow, Cap. Guide 1859, p. 516; Am. R.R. Jour., Vol. 15, p. 502.

In March, 1857, Missouri state bonds were selling in New York at eighty-three, and by the end of the year had dropped to
30. This table is taken from Stow, Cap. Guide 1859, p. 516.
31. Taken from Am. R. R. Jour., Vol. 15, p. 502, which in turn is taken from the Report of the Auditor of Missouri, and from Stow, p. 516. The discrepancy from the first table in the case of the Pacific Railroad is due to an additional grant after 1857.

32
sixty-five; even the most optimistic of railroad enthusiasts could hardly find warrant for securing capital on such terms. An attempt was made in 1860 to revive the Missouri policy of state aid, but the bill that was passed by the legislature was 33 vetoed by Governor Stewart.

With the possible exception of the Hannibal and St. Jo., the railroads of rissouri put their greatest reliance in state aid during the fifties. The Hannibal and St. Jo. used stock subscriptions more than bond issues, and managed to remain solvent throughout the war period. In spite of the panic of 1857 it continued to build rapidly during 1858 , and in 1859 opened its 34 whole line from Hannibal to St. Jo. It was the first railroad to cross the first tier of trans-iLississippi states, and was also the first line to enter St. Jo. During 1861 connection was made with the Juincy and Palmyra at Ouincy, and the two roads were 35 operated together for military reasons. Consolidation was ef36 fected in 1867.

The remainder of the state aided roads tried to continue building after 1857, but soon found themselves in insuperable financial difficulties. The Pacific Railroad was forced to dis-

continue operations during l857, but resumed building the following year. Construction was continued throughout the period of the Civil War, but the amounts completed were only from five 37
to twenty-fives miles per year. In 1860 the road failed to pay 38 interest on the state bonds. The resulting depression in the affairs of the company was met in 1864 , when the state reduced its bonds to the position of a second lien on the property, and 39 allowed the road to issue its own first mortgage bonds. With this assistance the road was able to finish the last sixty-five miles of its line so that by September, 1865 , it could run trains 40
from St. Louis to Kansas City.
The North Missouri struggled along from 1857 to 1859 before it finally collspsed, and during this time managed to complete its road to a junction with the Hannibal and St. Jo. at 41 Nacon, one hundred and seventy-one miles from St. Louis. In 1864 the road was given the same aid as the Pacific Railroad allowed to issue first mortgage bonds, the state reducing its

own claim to the status of a second lien. It was also allowed to include the Chariton and Randolph and the Missouri River Valley railroads. In spite of this concession no more work was done 43 until after the reorganization of the company in 1867.

The renainder of the Missouri lines may be disposed of very briefly. The St. Louis and Iron Mountain managed to get 44 as far as Iron Nountain in 1858 , and in 1859 failed to meet the payments on its loan from the state. Attempts at revival were unsuccessful until almost the end of the next decade. The Cairo 46
and Fulton had been chartered in 1853 and had received both state and national aid, but in spite of this assistance was not able to open any of its line for operation before the close of the 47 war. The Southwest Branch reached Rolla by the end of 1860 and on Jenuary lst of the following year defaulted its payment of 48 interest on the state bonds. No further construction took place until after the war. The Platte County Railroad secured the franchises of the Weston and Atchison and of the Atchison and 49
St. Joseph in 1859, and built as far as weston by the early part 50 of 1861. It went bankdrupt in the same yeer, and although there

was an attempt to revive the project in 1863 under the name of 51
the Platte Country Railroad, nothing further vas done until after 52 its reorganization in 1867 as the Missouri Valley.

The Missouri policy of state aid ended with the panic of 1857, and may be considered successful insomuch as it caused the building of a considerable amount of mileage that in all probability would not otherwise have been constructed until much later. On the other hand, the building was of course premature, and on this account produced a very unsatisfactory condition of railroad finance. When state aid was stopped construction graduelly ceased and by 1861 every road except the Hannibal and St. Jo. 53
had fallen. The Pacific Railroad began to get on its feet again during the middle sixties, due in great part to the fact that it occupied a trategic position and filled a real need.

The remainder of the roads were foreclosed by the state, and sold with the provision that they complete their rescective lines in a specified time. The St. Louis and Iron Mountain and the Cairo and Fulton were sold together in 1866 for $\$ 900,000$ to KcKay, Read and Company; the original cost to the state was $\$ 4$, 250,000. An investigation of the transaction in 1867 showed

that there had been irregularities in the sale - the hichest bid had not been teken, no effort had been made to determine the financial standing of the purchasing company, and the Cairo and Fulton property had been proportionately overhauled in order that it might soon be dropped and a large profit made on the other line. The conclusion that there was fraud and collusion in the sale was strengthened by the immediate transfer of both lines to Thomas Allen. In the ensuing investigation (1868) all the proceedincs thus far were whitewashed, but not without numerous suspicions and rumors of undue influence exerted by the railroads on the committee. An act, of March 17, 1868, confirmed Allen's title and provided that the unpaid portion of the purchese price $(\$ 664,300)$ should be released at the rate of $\$ 15,000$ per mile as 55 fast as the road was built.

The Platte County Railroad, reorganized in 1863 as the Platte Country, and then in 1867 as the Lissouri Valley, was released from the state lien in 1868 on condition that it pay 334,000 in state bonds, 324,000 in company bonds, and 100,000 in company stock, end that it finish its road to the Iowa line by December 1, 1869.

The North lisissouri was released from $\$ 2,000,000$ of its debt to the state February 10, 1864, $\$ 6,000,000$ more on Februery 10, 1865 , and finally completely freed in 1868 by the payment of

56. Million, p. 159.
$\$ 200,000$, and the promise to complete its line to the northern boundary of the state in nine months and to the western boundary 57 in eighteen months.

The S. W. Branch was included in the act of February 19, 1866, and sold to J. C. Fremont for $\$ 1,300,000$; after an unsuccessful attempt to make it pay, he re-sold it for the same amount. The company could not even meet this obligation and in 1867 was again foreclosed; this time the property we.s sold to the South Pacific Railroad Company, which deposited $\$ 1,500,000$ as a guar58 antee for the completion of the road to the state boundary.

The conclusion has been drawn from the foregoing experience that state aid failed because of imcompetency and corruption. It would rather seem, however, that other factors played just as important a role. The state had neither the wealth to build railroads on a sound besis nor the business to make them profitable after they were constructed. The probability of financial trouble was made inevitable by the hard times attendant on the panic of 1857 and the confusion of the Civil War. Financielly, the whole affair was a tremendous drain on the resources of the state, and the last of the debt that was incurred was not paid off until 1903. A re-occurrence of any similar incident was eliminated by 60. the provisions of the Constitution of 1875.

60. Constitution of Iissouri 1875, Article 4.

The situation in Texas differed greatly from that in Missouri, and in general the laws were more conservative, thus providing better protection against miscarriage. The first aid was given in the form of a general land grant giving eight hune dred odd sections for each twenty-five miles of the road put into running order - the surveying to be done by the company. Several distinctive features of this law may be noted. It did not discriminate in favor of any particular lines, but left the affair to individual initiative. The amount of land eranted was not quite as much as that of the usual Congressional land grant, and the government was saved the expense of surveying. The provision for the completion of the road before title to the land could be acquired, while not differing from the usual act of Congress, was carried on to all forms of state aid.

Direct financial assistance was given by the law of August 13, 1856, which made provision for a loan from the public 62 school fund of $\$ 6,000$ per mile to any railroad desiring aid. The law was general, applying to any road; the money was to be paid only as fast as the road was completed, and was to constitute a first lien on the property. These provisions, and particularly the provision for making the loan only as fast as the railroad was completed, made the operation of the law much

more satisfactory than was the case in Missouri, particularly because the roads were not tempted to overbuild quite so rashly. The comparative success of the Texas law is best shown by the fact that the policy was continued throughout the sixties and early 63 seventies, and even additional aid was given to particular roads during the early seventies - as for example the grant of $\$ 10,000$ 64 per mile to the International in 1870. As in Missouri the practice of lending state funds was finally stopped by Constitutional provision (1876). The land grant policy was not repealed until 66 1882. The comparative conservation of the Texan policy is demonstrated by the small amount of debt which accrued on this a.ccount. In 1872 it amounted to $\$ 2,173,878$, and by 1874 to $\$ 4,822$, 67 000, which represents a maximum figure.

The story of railroad construction in Texas from 1857 to 1865 is quite uniformly uneventful. Not stimulated by the promise of large amounts of government aid, the panic and the war had a complete opportunity to stop construction.

The Buffalo Bayou, Brazos, and Colorado arrived at Alley68 ton in 1860 , and stayed there for the duration of the war.

The San Antonia and Mexican Gulf, chartered September 5, 1850, to build from a point on the Gulf between Corpus Christi

69
and Galveston to San Antonia, built five miles from Port Lavaca 70 by January 31,1858 , in order to save its charter, and after being reorganized and re-invogorated with foreign capital, arrived at 71
Victoria ( 27 miles) in 1861. The road was destroyed in 1863 by the order of Maguider, and was rebuilt in $1865-6$ by the federal 72 forces.

The most significant road to be begun during the period was the one projected to run from Houston to New Orleans. Chartered in 1856 0.s the Sabine and Galveston Bay Railroad and Lumber 73 74 Company construction was started at Houston in 7858. In 1859 the name was changed to the Texas and New Orleans in order to get the benefit of a Louisiana chorter and to make connections with 75 the Louisiana road. By the early part of 1861 the road was 76 opened one hundred and five miles to Orange on the Sabine River, but connection was not made with the Louisiana line until after 1865. During the latter part of the war the road was dismantled by the Confederates and went into bankruptcy, so that a com77. plete reorganization and reconstruction was later necessary.

The Houston and Texas Central continued to struggle under

en increasing financial pressure, and was completed as far as 78
Millican in 1860. The following year it succombed and was sold 79
to its bondholders and creditors. Nothing more was done until 1866.

The Washington County Railroad was chartered February 2, 1856, to run from a junction with the Houston and Texas Central 80
to Brenham. Work was started in 1858 and the whole line was 81
put into operation in 1860.
The Galveston, Houston and Henderson was put into operation from Houston to Virginia Point in 1858 , and the bridge connecting it with Galveston was finished in 1859, whereupon the 82 road became bankrupt, and was foreclosed the following year.

The Houston Tap and Brazoria was chartered September 1, 83
1856, to continue the line of the Houston Tap Railroad. In 1858 84
it bought the Houston Tap from the city of Houston; financial depression delayed the work so that it was 1860 before the road was completed the fifty miles to Columbia, the point at which it 85
stayed until after the war.
State aid in Arkansas was hampered more by practical dif-

ficulties than by the fear of consequences. Arkansas had invested heavily in a state bank just prior to the panic of 1837 and when the crash came the state found itself unable to meet its 86 obligations, so that it practically repudiated the debts. In consequence the credit of Arkansas was not particularly strong during the fifties, and any attempt to aid railroads by the use of state bonds would have been ridiculous in view of the fact that no market could be found for them.

Arkansas was without a single complete line of road when the war ended, and it was felt that something should be done about the matter. Consequently a law was passed over the governor's veto in 1867 to provide aid to the extent of $\$ 10,000$ per 87
mile. Nothing was done to carry this law into effect until it could be seen what attitude the Constitutional Convention would take. The Constitution of 1868 provided for state or county aid 88 upon vote by the people, and in the same year a law providing for state aid to railraods was placed before the eledorate and rati89 fied. Bonds of $\$ 10,000$ per mile for land grant roads and 15,000 for non land grant roads were to be issued as a first lien on the property. Eight hundred and fifty miles were to be aided, said lines to be designated by a Board of Railroad Commissioners. The

money was to be paid as fast as the road was ready for the rails in ten mile strips, and after the capital stock had been sold in large enough quantities to pay for preparing one-third of the road for the reils.

90
The following lines were to be aided, -
Little Rock and Ft. Smith - $\quad 150$ miles.
Memphis and Little Rock - 130 miles.
Cairo and Fulton - 300 miles.
Little Rock, Pine Bluff and New Orleans - 150 miles. Kississippi, Ouachita and Red River - $\quad 150$ miles.

The Cairo and Fulton refused to accept the aid and consequently future readjustments were made.

By the close of 1870 the following amounts had been is91 sued, -

| M. and L. R. | $1,050,000$. |
| :--- | ---: |
| L. R. and Ft. S. | $900,000$. |
| L. R. , P. B. and N. O. | $750,000$. |
| M. O. and Red R. | $450,000$. |

In 1872 the total amount was $\$ 4,350,000$.
The operation of the law did not fulfill the optimistic expectations of its framers. The Memphis and Little Rock and 92 the Little Rock and Ft. Smith were able to complete their lines.
90. Poor's Manual 1871-2, p. 567.
91. Million, p. 217 ; P. Clayton, The aftermath of the Civil War in Arkansas (N.Y.,1915), p. 238, gives a table of the amounts authorized.
92. The Memphis and Little Rock was completed in 1871 and the Little Rock and Ft. Smith in 1876.

The other two roads, for which state aid was expected to accomplish the most, were not able to open any line at all, while the greaest mileage that was built was opened by the Cairo and Fulton, which had refused the aid. The truth of the matter was that the railroads could sell their own bonds just as easily as those of the state, and consequently the aid accomplished but little.

The Constitution of 1874 provided that there should be no future loans of state credit, and that the amounts already loaned could not be reduced by the legislature but must be paid 93
dollar for dollar. The Constitution was amended in 1885 by the addition of Article 20 by a vote of 119,806 to 15,492 ; three sets of internal improvement bonds, among which were the railroad 94 bonds, were repudiated.

Minnesota in the fifties had the greatest railroad excitement and the least results. Numerous lines had been chartered by the territorial legislature before 1857, but the population and resources of Minnesota were hardly sufficient to produce successfully operating railroads. In this situation the roads looked almost entirely to the government for aid. The first bill passed by Congress (1854) was for a road from St. Paul to Duluth, but provided that the grant should not go to any rail-

94. W. F. Kirby, A Digest of the Statutes of Arkanses (Austin, Tex., 1904), p. 108.
road already chartered. In miolation of this provision it was given to the Minnesota and Northwestern, whereupon the act was repealed by Congress in the same year. The regular grant came Nay 3, 1857, and provided for a system of roads radiating from St. Paul, plus a line directly west from Winona. No provision was made for the old St. Paul - Duluth line until 1864.

The grant of 7857 was received with a shout of joy by the 96
Kinnesotians, and work was started with alacrity on the various lines. Unfortunately the panic intervened in the same year and construction was forced to stop. It was just at this time that Kinnesota was getting ready for statehood and was adopting a new constitution. Linked with the interest in statehood was the enthusiasm for transportation, not at alll dampened by the depression 97 of the panic. As soon as the constitution wes adopted it was amended almost unanimously in order to loan $\$ 5,000,000$ to the railroads benefiting from the Coneressional land grant. The act proVided that the bonds should be issued at the rate of $\$ 100,000$ for every ten miles graded and an additional $\$ 100,000$ for every ten

| Minnesota and.Pacific | $1,250,000$ | 600,000 | 62.5 |
| Minneapolis \& Cedar Valley | $1,250,000$ | 600,000 | 69.25 |
| Transit | $1,250,000$ | 500,000 | 50. |
| Southern Minnesota | $1,350,000$ | 575,000 | 37.5 |

It may be noticed that all the construction was done in the form of grading, since that was the easier and more economical way of securing the aid; by 1859 the bonds had reached such a low 100 figure that any further sales were useless. The people of the state felt that they had been tricked by the railroads into paying for a large amount of grading at more than its original cost, and consequently in 1860 the original amendment was repealed by a 101
larger vote than had passed it two years before. The sum total of work done was some two hundred miles of grading; about one thousand four hundred feet of track were laid by the Minnesota and Pacific before it collapsed, in order to run an engine into
99. Taken from Am. R.R. Jour., Vol. 15, p. 506, and F.R. Holmes, Kinnesota in Three Centuries ( 4 vols., Mankato, 1908) Vol. 4, p. 347 .

storage.
The results of the incident were regretable. Authorized by act of the legislature the governor foreclosed all the road 102
in 1860 and bought them in at $\$ 1,000$ apiece; later they were re103 granted to other companies. The payment of the bonds was a rather delicate question. Investigation revealed that Selah Chamberlain, who was the largest holder, had paid on an average 104
about thirty-four per cent. This condition, added to the fact that the people felt cheated in the whole transaction, created a feeling which made any settlement difficult. A law of 1870 proVided for the exchange of the bonds at par for land at eight dol105
lars and seventy cents per acre. No provision was made for the payment of interest, and the law was to be effective only if rata ified by the holders of two thousand of the bonds. With two thousand two hundred and seventy-five bonds outstanding, the holders of one thousand and eighty decided not to settle for less 106 than twenty-five per cent. Nunerous efforts were made to repudiate the entire issue, and for a long time Poor's Manual considered them "practically repudiated," but in 1881 provision was made for a complete settlement of both principal and interest at

fifty cents on the dollar.
As indicated by the previous sketch, the history of all early minnesota roads is practically the same. Conseauently, the story of the individual lines will only be taken up for 1860.

The lifnnesota and Pacific, chartered in 1857 to partici108
pate in the land grant, also received part of the state loan, and 109
did some grading before 1860. In 1860 it was foreclosed and 110
bought by the state. Re-chartered in 1861, Edmund Rice made magnificent efforts to fulfill the requirements of the charter, 111
but failed. In l862, the road was again foreclosed, being re112
chartered as the St. Paul and Pacific and opened from St. Paul to St. Anthony in June, 1862 - the first railroad in IInnesota.

With the aid of foreign capital and part of the state swamp land 114
grant it was enabled to reach Elk River by 1864, at which point it stayed for two years unti, Rice succeeded in interesting more foreign capital. It is interesting to note that James J. Hill 115
entered the employ of the road in 1865; years later this line
was to become the foundation of his railroad power.

The Linnesota Valley was originally a part of the Root 116
River Valley and Southern Minnesota, chartered May 22, 1855. In 1857 the name was changed to the Southern Minnesota and the 117
road given a part of the land grant. Participating in the state 118 aid, it failed in 1860 and was foreclosed. Re-chartered iarch 8, 1861, March 10, 1862, and March 28, 1863, it failed to live up to the conditions of its charters and each time returned to the 119 state. In 1864 it was divided and the part from St. Paul southwest went to the Minnesota Valley, which was conrolled by F. Drake and his associates, who also had a charter from Iowa to 120
allow them to continue their road to Sioux City. Work was finally begun in earnest and by 1865 the road was opened twenty121
eight miles to Shakopee, from which point it continued to advance steadily.

When the Southern Minnesota Railroad was split in 1864 the line west from La Crescent, with a branch to Rochester, remained under the old name. In 1865 it was given part of the 122
state swamp land grant, and had opened ten miles of its line by 123 the end of the year.

The irinneapolis and Cedar Valley was chartered Larch 1 ,

1856, and received both national and state aid. Foreclosed 125
and bought by the state in 1860 , it was reorganized in 1863 as 126
the Minnesota Central. St. Paul gave the road a considerable 127
amount of aid and by the end of 1865 construction had been com128
pleted to Faribault - fifty-six miles.
The Transit Railroad was chartered March 3, 1855, and 129
also received both national and state aid. After doing some grading the road failed and was foreclosed and bought by the 130
state in 1860. It was re-chartered March 8 , 1861 , as the Winona, 131
St. Peter and Missouri River, and Karch 10, 1862, as the Winona 132
and St. Peter. Under the latter name it completed seventeen 133
miles in 1862 and by 1865 had been constructed to Kasson (sixty134 four miles).

Iowa was the only state in the first tier of trans-Missiasippi states never to try the experiment of state aid. The

Constitution of 1846 limited the state debt to one hundred thous135
and dollars and the Constitution of 1857 specifically prohibited 136
any state aid. As has previously been suggested the larger roads building from Chicago took a very active interest in particular Iowa lines in order to guarantee through connections to points on the Missouri river. The period from 1857 to 1865 continues to show the same characteristic, and emphasizes the fortunate position of Iowa as far as railroad construction was concerned.

The Mississippi and Missouri completed its main line to 137
Harengo (eighty-four miles from Davenport) by 1860 , and a branch 138
from Luscatine to Washington was completed in 1858. In 1865 a definite agreement was made with the Chicago and Rock Island, 139 which up to this time had only a tacit interest in the line. The financial condition of the road had been very poor for a long time and in 1866 the line was foreclosed, being purchased by the Chicago and Rock Island, and completely losing its separate iden140 tity.

The Keokuk, Ft. Des Moines and Minnesota reached Bentonsport in 1858 , and many of the members of the first legislature to meet in Des Moines took the opportunity of enjoying the novelty of 141 riding on a railroad train on their way home. The land grant which had been made in 1846 for the improvement of the Des Noines 142 River was transferred to the road during 1858. The work of construction progressed slowly until 1861 when it seased altogether; it was revived in 1865 and pushed on to Des Moines by the fall of 143 1866, where it was the first line to enter the city.

The Burlington and Missouri River had started construction in 1856, and in 1858 opened for business for the first time - Bur144 lington to Fairfield. In 1859 it reached Ottumwa, where it 145 stayed until the end of the war.

The Cedar Rapids and Tissouri River was organized in 1859 to succeed the Iowa Central Air-line, and had practically the 146 same stockholders as the Chicago, Iowa, and Nebraska. In 1860 it received the grant formerly given to the Iowa Central Air-Iine on condition that it build from Clinton to Lyons, neither of which 147
cities were on the main line. Building progressed steadily

throughout the war period and the raad reached Boone by 1865. In 1861 J. I. Blair of the Galena and Chicago Union secured an interest in the road, and the following year it was leased in
perpetuity. The lease was amended in 1864 owing to the forination 150 of tine Cnicago and Northwestern by consolidation.

The Chicago, Iowa, and Nebraska, with the same stockholders as the Cedar Rapids and Missouri River, was finished to 151
Cedar Rapids in 1859, and by means of a steam ferry at Clinton 152 made through connections with the Galena and Chicago union. In 1861 Blair got control of this road also and in 1862 it was leased to the Galena and Chicago Union, or the Chicago and North153 western after 1864. In 1865 the second bridge across the Miss154
issippi below St. Paul was completed at Clinton, and the Chicago and Northwestern had a through line from Chicago to Boone (three 155 hundred and forty miles).

The Dubuque and Pacific was built largely on the basis of land speculation, the land grant being given as a bonus on the 156
stocks and bonds of the company. Steady progress was made up to

the outbreak of the war, a.t which time it had reached Cedar Falls. Construction was resumed in 1865 , during which year the road was 158 completed to Ackley, one hundred and thirty-two miles from Dubuque. An amicable foreclosure occurred in 1860 and the road was sold to the Dubuque and Sioux City, a company controlled by the Illinois 159 Central. The lease of the line to the Illinois Central occurred 160 in 1867.

The Cedar Falls and Minnesota was organized in 1857 as a subsidiary company to the Dubuque and Pacific, and planned to build north from Cedar Falls to meet the Minneapolis and Cedar 161

162
Valley. In 1864 it was opened fourteen miles to Waverly, and 163
in 1867 was leased to the Illinois Central.
The McGregor, St. Peters and Missouri River planned to build through the aid of the Milwaukee and Mississippi, but was stopped by the war. In 1862 the McGregor Western was formed, 164 bought out the earlier line, and completed the work to Conover 165 (forty-five miles) by the end of 1865. In 1864 it was bought 166 by the Chicago, Milviaukee and St. Paul, and during 1865 was re-

167
organized.
The second tier of trans-lisisissippi stetes never gave 168
state aid for railroad construction, but it was during this period that the first lines were becun. The Marysville or Palmetto and Roseport, incorporated in 1857, was to run from larysville on the Webraska line to Roseport opposite St. Jo., there to make connec169 tions with the Hannibal and St. Jo. The name of Roseport was 170

171 changed to Elwood, and five miles of the line were opened in 1860. In 1862 the name of the road wes changed to St. Joseph and Denver 172
City, but no more work was done until after the war.
The Leavenworth, Pawnee and Western was orgenized in 1855
and was included in the Pacific land grant of 1862. In 1863 the
Union Pacific acquired an interest through its purchase by J. C. Fremont and Samuel Hallett, end the name was changed to the Union 174
Pacific, Eastern Division. In the same yeer ground was broken 175
at Kansas City, and by 1865 it was opened to Perry (fifty-one nilles), so named in honor of the president of the company. The enthusiasm that the line created may be judged by the fact that

the legislature adjourned late in January, l865, to participate 176
in an opening excursion.
The Union Pacific also started building before 1865, but will be taken up more at detail in the next chapter.

In California the only direct state aid that was given was the guarantee of the payment of the interest on the United States bonds loaned to the Central Pacific. Road building started before 1857, however, and by 1865 the beginnings of the California railroad system had been made.

The California Central was organized in 1857 to continue 177 the line of the Sacramento Valley Railroad from Folsom northwest. 178
Six miles were built in 1860 ; in 1863 the line was bought by the Central Pacific and its further extension discontinued in order 179 to avoid competition with the main line.

The Pacific and Atlantic was organized in 1851 as a 180 transcontinental road with its terminus at San Francisco. From the vantage point of a later time the project shows itself to have been impossible. After two reorganizations the road limited itself in 1859 to the construction of a line from San Francisco to San Jose, under the name of the San Francisco and San

José, under the name of the San Francisco and San José. Even the lessened scope of the plan, and the nine hundred thousand dollars eid given by the counties along the route proved insuf182
ficient, and it was not until 1863 that real work started. San 183
José was reached early in 1864.
The Napa Valley Railroad was organized in 1864 as a branch 184
of the California Pacific. Aided by a heavy sbuscription from 185
Nepa County it was able to build from Napa to about the present 186
location of Napa Junction.
The San Francisco and Oakland was chartered liay 20, 1861, 188
and the line was opened in 1863. This route furnished one of
the few entrances to San Francisco.
The California Northern was begun in 1861 at Marysville
on the Sacramento River, the proposed terminus of the California 189
Pacific. The war intervened and stopped construction until
190
1864, when the line was opened to Oroville (twenty-six miles).
The Central Pacific was begun during the period, but is treated in the following chapter.

The third kind of government assistance to which every railroed looked was local aid, and in most cases they were not disappointed. The first tier of states passed the necessary legislation in the early fifties. At the time of the industrial collapse of 1857 all kinds of local aid were discredited and the three states that made constitutions during that year - Minne191192193 sota, Iowa and Oregon, prohibited the practice; Nevada took the 194 same action in 1864. After the Civil War there was a reaction in favor of the railroads, and until the early seventies county 195

196
aid was again favored, - Missouri, 1865, Arkansas, 1868, Nebras197

200
ka 1869, California 1870, Ninnesota, 1871, and Texas 1871. In these cases the old freedom was somewhat lost and the right was generally restricted by giving a maximum limitation or providing for a vote by the people, often requiring a two-thirds majority to pass. Possibly Kansas might also be included in this group, allowing county aid by the law of 1862.
191. Constitution of Minnesota 1857, Art. 9, Sect. 3. 192. Constitution of Iowa 1857 was silent; prohibition was made by law shortly after.

In the early seventies came the Granger anti-railroad agitation, and most of the states limited or stopped county and 201 other local aid - California 1872 and 1874, Arkansas 1873 and $202203 \quad 204 \quad 206$ 1874, Kanses 1874, Kissouri 1875, Texas 1876, and Colorado 1876. Nebraska was the one exception to this tendency, permitting county 207 aid by her constitution of 1875 . The prohibition of local aid continued as a uniform state policy; only two exceptions can be noted208209 North Dakota 1889, and Utah 1895, and in both of these cases the surrounding conditions were so strict as to amount elmost to a prohibition. It may be noticed that the same general tendency is observable in the course of the history of both state and national aid.

County subscriptions were usually obtained by appealing to local pride and ambition. Very frequently, as for instance in the case of the Pacific Railroad of Missouri, the Hannibal and St. Jo., the Mississippi and Missouri, and numerous others, a
201. Statutes of Cal., 19th Sess. 1871-2, pp. 444-5, left certain exceptions; Statutes of Cal. 20th Sess. 1873-4, p. 26, make the prohibition complete.

proper amount of aid was elicited by surveying the line over several different routes, and getting the various counties to compete in the amount of assistance to be offered. In the case of many smaller local roads such as the Washington County Railroad of Texas and the Napa Railroad of California, one or two towns or the county sponsored the road. Nany of the more ambitious cities, such as St. Louis, Dubuque, Davenport, Galveston, Houston, San Francisco, etc., aided several roads as a means of local advancement.

Local aid proved to be eminently satisfactory until the particular county, city or town had to begin to pay. In the enthusiasm of the moment many local organizations had issued bonds for more than the value of the entire taxable property, while in some cases the bonds were issued with no guarantee of the building of the road, so that after all the bonds were issued nothing had been done in actual work but a few miles of grading. Of course there was some dishonesty on the part of certain railroad companies, but on the whole it seems that the trouble in which many of the counties later became involved was due in most part to their too great optimism and lack of caution.

The natural reaction of the counties upon finding themselves burdened with a debt which they could hardly meet, was to feel themselves agrieved and tricked by the railroad, and to try to avoid payment. Numerous cases of this kind might be shown; the outstanding one is the Yankton bond case, which attained a considerable amount of publicity because it happened to be drawn

210
into national politics. The details of the transaction are not particularly important. Yankton had issued bonds $(200,000)$ in favor of the Dakota and Southern and the bonds had been approved by act of Congress. The first trouble came in 1873 when the railroad proposed to issue a first mortgage of $\$ 1,200,000$ which would have made the holdings of Yankton County practically worthless. After getting an injunction against the mortgage the case was finally settled out of court. In 1875 a bill to repudiate the Yankton bonds was passed by the legislature but vetoed by the Governor. The following year a certain John Treadway of Yankton County began a test case by refusing to pay the railroad tax, although offering to pay the remeinder of his assesament. The case was appealed to the Territorial Supreme Court, which decided that the legislature which authorized the bonds was not legal, and that Congress had no power to legalize the action.

In the same year the National Bank of Brunswick, Maine sued for the recovery of the interest on 10,000 of the bonds. Owing to the decision of the court in the former case, the suit was lost in both the District Court and the Territorial Supreme Court. It was carried to the United States Supreme Court, where Chief Justice Waite reversed the decisions of the lower courts
210. G. W. Kingsbuy, History of Dakota Territory (2 vols., Chicago, 1915) Vol. 1, pp. 623-647, gives the best and most complete account of the case. This account has in general been followed in the discussion in the text.
and ordered the county to pay, on the ground that Congress had supreme power in the territories.

The remainder of the story becomes a farce. The bondholders tried to serve processes on the county officials, but the oficials avoided the situation by conveniently resigning just before the process was served. After a good deal of this sort of thing, a compromise was effected and the bonds were eventually paid. The effect on national politics was that Dakota was not admitted to statehood until the end of the eighties. The attempted repudiation on the part of Yankton County produced an unfavorable reaction on Nev England, which vas a creditor community and feared the possible outcome of statehood which would produce complete independence in the matter. The resulting sentiment was sufficient to control the balance of power and keep Dakota a territory for at least ten years longer than would normally have been the case.

The Yankton case has been discussed at considerable length beceuse it was unusuelly prominent and is fairly representative. The county felt cheated and tried to avoid the payment of an obligation contracted in a moment of undue optimism. The western courts, appreciating the viewpoint, favored the county, but the Supreme Court had little sympathy with such a feeling and reversed the earlier decisions. Practically all the bond cases which reached the Supreme Court were
decided in favor of the bondholders. Many of the debts that were incurred were not finally settled for as long as fifty years; for instance, the Mount Pleasant Township (Missouri) 211 debt of 1870 was not completely paid until April, 1922. Any exmination of local histories must show the close connection 212 between local railroad debts and anti-railroad feeling.
211. S. W. Ridines, "Old Railroad Bond Debt Paid," in Kissouri Historical Review, Vol. 16 (1921) pp. 170-171.
212. The Missouri county histories, for instance, are usually very bitter against the railroads.

## Chapter III. The First Transcontinental Line.

From 1857 to the outbreak of the Civil War there was a lull in the movement for a Pacific railroad, due partly to the general depression following the panic and partly to political conditions. The latter fifties was a period of very marked political readjustment. The older parties were Eivine way to a newer split wilch divided the country entirely between the north and south, while the older statesmen who had depended on the compromise method for settling difficulties were giving way to a younger and more radical group. This new spirit produced important changes in the railroad field. It was felt that only one transcontinental line could be built, and the increasing division between the north and the south produced a practical deadlock. For this reason almost nothing was done after 1854-5 not because its promoters had lost confidence in the enterprise, but because it was a practical impossibility until some change occurred in the political complexion of the country.

The political change that occurred was the withdrawal of the south from the Union, thus leaving the way open for legislation that had heretofor been blocked. The immediate results were the creation of a new group of states and territories, the chartering of a Pacific railroad, and tine passing of a homestead law, all of which measures were closely linked together. The route of the first transcontinental line was dictated by practical considerations. It was to start from a point almost due west of Chicago and run directly west as near as practicable into Nevada,
and from that there was to cut down to San Francisco. Branches were included in order to at least minimize local jealousies. This route furnished the most direct line possible, and tapped the most populous portions of the west.

The principal backers of the new project had organized a company in the spring of 1861 and T. D. Judah and Peter Dey had gone over much of the proposed route in 1861-2. Congress got around to chartering the road in July, 1862 , and the resulting act was acclaimed all over the North as epoch making. In September the corporation had its first meeting at Chicago and W. B. Ogeden (Illinois) was elected President, N. V. Poor (New York) Secretary, and T.W. ALcott (New York) Treasurer. Many prominent people were present at this first meeting, which resolved itself into a convention and devoted the majority of its time to speech-making and the rousing of enthusias:n.

The act of July 1, 1862, which incorporated the road provided for a land grant of five sections per mile on each side of the road, and bond eid of $\$ 16,000$ per mile except in the mountainous portion where it was increased to $\$ 48,000$ - such eid to constitute a first mortgage on the property. It further proVided for a capital stock of $100,000 \$ 1000$ shares, with a maximum holding limited to two hundred shares; Two thousand shares had

2. For instance Am. R.R. Jour.,1862, p. 565 \& 1863,p.498. 3. Am. R.R. Jour. 1862, p. 686, pp. 719-722.
to be represented at the first stockholders meeting. In accordance with this plan, books were opened and subscriptions were received in the winter of 1862-3; surveys were made, and preparations were gotten under way to start actual construction. Then it was discovered that the $\$ 2,000,000$ subscription which was necessary preliminary to the first meeting of the stockholders had not been taken up entirely, and consequently the 6 effort came to a halt.

The principal suggestions as to the fect of the original scheme were as to gauge, government aid, and financial organization. The original gauge of five feet was considered a serious handicap because it prevented connection with the eastern roads, which by this time were generally accepting standard gauge (four feet eight and a half inches). A more serious objection was in the case of government aid. It was also pointed out that $\$ 1000$ shares were too expensive for the ordinary investor, and that a reduction of the amount would probably have the effect both of increasing the number of the subscriptions and of securing a more general interest in the project.

Only the most minor of these changes was made in 1863; 7
on March 3, 1863, the guauge was made standard. The remaining propositions were drawn up in the form of omendments to the 8 original bill, but no action was taken upon them;they were final-

ly all lincluded in the amendment of July 2, 1864. The land grant was doubled, the United States bonds were reduced to the rank of a second mortgage, and the shares were made one million 9 at $\$ 100$, with a fifty share maximum.

In the fall of 1863 the road finally began to have the appearance of a going concern. By October the $\$ 2,000,000$ had been subscribed, the first director's meeting had been held, and 10 permanent officers had been chosen, -

President - Gen. John A. Dix.
Vice President - T. C. Durant.
Treasurer - J. J. Cisco.
Secretary - H. V. Poor.
The first ground was broken on the eastern part of the main line at Omaha in December, 1863.

During 1864 and the first half of 1865 very little work was done on the road. The energies of the country were fully occupied in the final phases of the war and neither money nor labor could be found available, in spite of the additional Congressional aid. It was during this period, however, that the practical financial arrangements were made which enabled later construction to proceed.

The chief difficulties in the building of the Union Pacific were financial; the actual construction of the road presented

no engineering problems which the men in charge were not equipped for handing. On the other hand, the financing of a thousand miles of raod, mostly through an uninhabited section of the country, was no easy operation. Two fundamental difficulties had to be met; in the first place, the financial scheme to be used had to take into account the fact that in all probability the road could not be operated at a profit for a long time to come; in the second place, the original Union Pacific act provided that the stock and bonds should be sold only at par and for cash, and since it was almost impossible to secure capital on this basis some way of avoiding the provision had to be devised.

Early in 1864 T. C. Durant, Vice-President of the Union Pacific, evolved a scheme for getting around all of these difficulties. To carry out this idea he bought the Fiscal Agency of Pennsylvania on March 16, and on March 26 had the charter amended so that the name of the company became the Credit Mobilier of America and so that a branch could be established in New York 12
which could take over the majority of the business. The plan to be followed was extremely simple. Union Pacific men also con-
12. C. M. Crawford, The Credit Mobilier of America its origin and history (Boston,1880) pp. 15-22. Crawford gives the most complete account of the Credit Mobilier but justifies the company. Credit Nobilier Investization. Report of the Suecial Committee, in 42 nd Cong., 3rd Sess., House Reports $77,78,81,82 \& 95$ gives one of the most complete surveys of the case. Renort of the Special Comrnittee on motion of $3 \mathrm{rd}-5$, 1873, in 42nd Cong., 3rd. Sess, Sen. Rpt. 519 contains a more brief summary. Message of the President of the United States transmitting the report of the U.S. Pacific Railway Comin. and the testimony, in 5 th Cong., list Sess., Sen. Doc. 51,5 vols., is the most complete and valuable document in relation to the history of the Credit Mobilier.
trolled the Credit Mobilier. Contracts were to be awarded to dummies and transferred to the Credit Mobilier. The contracts Were to be paid for in cash (cheque), the cash immediately returned to the Union Pacific for stocks and bonds at part, and then the stocks and bonds could be sold by the Credit Mobilier for anything that they could bring. By this plan the drawbacks of the original bill were avoided, and by making the contracts high in amount, provision could be made for the discrepancy between the par value and selling price of the railroad securities. Added to these advantages, the stockholders of the Credit Mobilier were liable according to state law only to the value of their stock, and there was a great possibility that the inner controlling ring could make a greater profit on construction than it could ever make by the actual operation of the completed road.

Both sides of the Credit, Mobilier story have been told with such completeness that it is unnecessary to repeat any but 13 the salient factors. During 1864 and 1865 the company was in a rather poor financial condition, and in the latter year Oakes Ames, a Massachusetts member of Congress, was induced to take hold. In doing so, he tried to get the aid of other members of 14 Congress, but failed. During 1866 conditions began to improve, construction was undertaken, and by the end of 1867 the Credit
13. See references of footnote 12 and also J.P. Davis, The Union Pacific Railway (Chi., 1894), and H.K. White, History of the Union Pacific Railway (Chi., 1895).
14. Crawford, pp. 91-92; Oakes Ames a Memoir (Camoridge, 1883),p. 7. This last account is frankly partisan.

Mobilier declared its first dididend - $\$ 2,244,000$ in Union Pacific bonds(then selling at thrity) on an original capital of $\$ 3$, 750,000 , which had been gotten by giving a Union Pacific bond bonus on all stock subscriptions equal to the amount of the sub16 scri tion.

When Ames returned to Congress in 1867 the members whom he had previously asked for aid remembered his old offers and re16
minded him of his earlier promises. Ames felt it advisable to hold to his earlier offers as much as possible, with the idea pf 17
distributing his stock as widely as he could. He at least felt that there was a considerable advantage in having a laree number Of prominent legislators as members of the Credit Mobilier. Whether the underlying purpose was limited purely to distinction, confidence and prestige, or whether there was a secondary, highly practical, and less comendable purpose, is still a question.

The first great publicity to the affairs of the Credit Mobilier was in 1872 when a number of Oakes Ames' letters were published, which seemed to give a basis to the charge that the company's stock had been used for the purpose of unduly influ18
encing members of Congress. The revived interest in the Credit

18. House investigation, in 42nd Cong.,3rd Jess., House Reports 77,78,81,82 \& 95. Senate investigation in 42nd Cong.,3rd Sess., Sen. Rpt. 519. The first is the Poland investigation, and the second is the Merrill investigation. The largest piece of work is that of the Pas. Rwy. Comin., in 50th Song.,lst Sess., Sen. Doc. 5l, which includes over 4 vols. of testimony.

Nobilier and its relation to the Union Pacific also brought other facts to light; it was charged that the Union Pacific had at least violated business ethics in giving contracts indirectly to its own stockholders, and that the Credit Mobilier had made exorbitant profits, thus limiting the ability of the Union Pacific to pay its debt to the United States. These last two charges were investigated several times in connection with Congressional legislation on the subject of the Comapny's debt to the government.

The charge of collusion in the making of the contracts seems not to be very serious. As explained before, an evasion of the law was necessary before any work could be done, and it seems irrefutable that the interested periods were not so much seeking to defraud anone, 3 to build the railroad in the only possible way. Such construction companies were very common at the time, and the idea of a violation of business ethics was the product of a later generation.

The question of bribery is more serious. Although Ames himself seemed to have no feeling of wrongrdoing, the distribution of stock in Congress was at least open to question. Probably Ames had no direct idea of influencing legilation, but he certainly felt that the distribution would aid his cause by producing a favorable sentiment. The doubtfulness of the affair is emphesized by the fact that at the time when the stock was distributed the company did not need additional capital which could not have been secured more easily in other ways. Thins it
seems that the vote of censure that was passed, while being extrenely hard on Ames personally, was entirely justified.

As to exorbitant profits, it would certainly seem that the Credit Mobilier was run with the idea of making a profit on the construction which could not be made on the operation of the 19 road. The most conservative estimate of the profits would seem to indicate approximately 320 per cent before 1869 , or over 60 per cent per year. This figure is based on the dividends declared by the Credit Mobilier translated into money values, estimating the Union Pacific stock as worth thirty and the bonds as worth eighty-five, on a total capital of $\$ 3,750,000$. It does not take into account the original bonus in Union Pacific stock, the later increased value of the stock, or the fact that not all of the capital was invested for the full five years. Considering that this figure is an absolute minimum, it would seem that indirectly the lien of the government had been injured, and that excessive profits had been made,

Beginning in 1865, actual construction was begun and 21
pushed. Colonel Dodge was put in charge of the surveying in in 1865, and in 1866 was given complete charge of all the work, Under his leadership nany of the discharged soldiers were employed and the work was organized on a military basis, which was rendered particularly necessary because of the trouble with the
21. C. G. Countant, The History of Wyoming (3 vol.Laramie, 1899), vol. 1, p. 675.

Indians. The lack of hardwood for ties was remedied by "Burnetizing" cotton-wood, that is, by dipping it in a solution of 23 zinc chloride. 24
finished and on January 24, 1866, it was accepted by the Presi25 dent. Construction was carried on in hundred mile stretches and supplies were hauled by wagon. All the bridge work was done 26 in advance.

During 1866 the road was completed a distance of three 27
hundred and five miles from Omaha, and on July 16 the first passenger tariff went into effect on the road to Ft. Kearney - ten 28 cents per passenger per mile. The Chicago and Northwestern was just completing the first railroad line to Omaha from the east, and in August 1866 the Union Pacific entered into an agreement 29 for the hauling of supplies as soon as the road was completed. Connection was made in January, 1867, and from that time on the Union Pacific had direct rail connection with Chicago and the east.

The Union Pacific had a considerable amount of trouble with the Indians west of Ft. Kearney in 1867, due to the Indian 31
unrest which then prevaded the country. By the end of the year the road had reached Cheyenne, where it made its winter headquar-

32
ters.
During 1868 and the early part of 1869 it wes completed to Ogden, where it made connections with the Central Pacific. The $\mathbb{N}$ ormons tried to get the road to padd through Salt Lake City, but failed. The question of a point of junction occasioned some slight difficulty, because each road built as far as possible in order to get the maximum amount of government aid. Consierable friction occurred between the Irish labor on the Union Pacific 34 and the Chinese labor on the Central Pacific. The junction point was finally fixed by act of Congress at Promontory Point, 35 near Ogden, and on May 10, 1869, the connection was made, thus 36 completing the first transcontinental railroad.

The cost of the line was somewhere around $\$ 106,000,000$, much of which had gone to the Credit Mobilier in the form of ex37 cessive profits. A large amount of stocks and bonds were outstanding, most of which had been sold at considerably less than par. The results was that the road found itself burdened with an excessive debt. On the other hand, the country through which the line ran was sparsely settled and the traffic was lifht. Consequently the road found itself embarrased for funds, and for at least ten years its control and operation was purely a speculative venture. As early as 1865 the Pennsylvania Railroad had

secured an interest in the enterprise and in 1871 , when Ames retired from the Presidency, Thomas Scott, who was also vice-presi39 dent of the Pennsylvania, took charge. Unable to make the road pay, he lost interest in it, end in 1873 Jay Gould bought control. No additional mileage was built before the panic of 1873 except for a branch from Kit Carson to Las Animas. This line was built to head off the Sante Fe and was leter removed.

The original inception of the Central Pacific, which built the western end of the line, may be ascribed to T. D. Judah, a railrocd enthusiast and engineer. His own plan was for a railroad built by small individual subscriptions, but he was able to 42 rouse very little support for it until about 1860-1. At that tine four of the leading merchants of Sacramento became identified with the project - Leland Standford, C. P. Huntington, Mark 43
Hopkins, and Charles Crocker. In June 1861 these men, together Fith Judah and a few others, organized the Central Pacific Rail44 road of California to build from Sacramento to the state line. 45
Surveys were made, and in 1863 the first fround was broken at

The financial condition of the backers of the road was not sufficiently strong to secure its completion on their own resources. Conse uently, e.s with most western roads, government aid was solicited. The Pacific Railroed Act of 1862 (amended 1864) made the Central Pacific the recipient of the land grent for the western half of the transcontinental line end also gove it the same bond aid that was given to the Union Pacif47
ic. The state of California guaranteed the interest on the com48 pany bonds, while three counties and the cities of Sacramento and 49
San Francisco subscribed to the capital stock. Consequently, the Central Pacific received every possible kind of eovernment aid. Leland Stanford, one of the four prime movers in the project, became Governor in 1862, and threw the entire weight of his influence in favor of the railroad.

The difficulties of construction were much the same as those of the Union Pacific, and were met in a very similar wey; the general motive was to make the greatest possible profit on the construction and government aid, with the feeling that only in this way was there a practical opportunity for a return on the investment. The first scheme tried was to award the con-

tracts to one of the members of the company, and for this purpose Charles Crocker resigned from the management of the Central Pacific and undertook the construction of the road under the name 51 of Crocker and Company. In 1867 the Contract and Finance Company 52 was formed, ostensibly to attract outside capital. The close parallel between this company and the Credit Mobilier, both as to organization and purpose, is so evident as hardly to require mention. The main distinction was that the Contract and Finance Company succeeded in getting its accounts into such a shape that later imvestigation encountered almost insuperable obstacles. Huntington, Stanford, Hopkins, end Crocker subscribed for the capital stock of the company, but paid for it with their personal notes rather than in cash. To secure the funds necessary for construction each of the men concerned loaned the recuired amounts from time to time as he was able, each keeping his own accounts. When any profits were made they were split equally. This method of finance was confusing enough in itself, but to add to the uncertainty the books of the company were "accidentally" destroyed in 1873; the result was the t all future deduections 53
beceme very uncertain. Certain conclusions seem inescapable, however, - (1) that the Contract and Finance Company was organ-

ized primarily to make a profit on construction which it was considered impossible to make on operation; (2) that the men who controlled the Central Pacific organized the Contract and Finance Company in order to secure a monopoly of all the profits that Light be earned; (3) that the contracts were exorbitant in 54 their terms; and (4) that the members of the Contract and Finance Company made a profit totally out of proportion to their investment, thus eventually placing the burden on the people of 55 the territory through which the road passed.

The actual construction of the road presents a pleasing contrast to the method of finance. Obstacles were every where abundant and were overcome with a vigorous energy characteristic Of the west. Climatic and engineering difficulties were numcrous, and were summounted only after consistent work; for instance, the Sierras had to be crossed very early in the process of construction, while the Union Pacific was able to construct two-thirds of its line before it encountered any very serious obstacles. lraterials and supplies were expensive and hard to get, both in bringing them to Sacramento and in getting them to the scene of construction. Labor was scarce, end finally Chinese had to be used in large numbers, mainly because of the lack
54. The Pacific Railway Commission estimates (pp.7475 ) that the contracts called for about twice the amount that was used for construction.
55. Prof. Daggett, who has done the most intensive work in this subject, estimates ( $\mathrm{pp} .80-82$ ) that the most conservative estimate possible shows that a profit of between 500 and $600 \%$ was made in 6 years, on a total investiment of $\$ 1,000,000$.
of any other supply. Money was herd to get, and no matter what conclusion is drawn concerning financial methods and excess profits, it must be remembered that the collection of actual cash to 56 carry on the work was always a serious problem. In spite of these difficulties, work was carried on continuously after 1865, and by 1869 the Central Pacific had also reached Ogden, to form 57 the western link of the first transcontinental railroad.

The natural result of railroad building carried on for the profit to be secured from construction contracts was that the owners of the road ordinarily desired to dispose of their holdings as soon as the line was finished. Having milked the company during the process of construction, there was very little hope that the road would be able to pay for itself at a later time. In the case of the Union Pacific the road changed hands twice within four years of its completion. In the case of the Central Pacific, local conditions produced a change from the normal procedure. During the last years of its building and even until as late as 1873 there are evidences that the as-
56. For accounts of the practical difficulties and how they were overcome, see Am. R.R. Jour. 1863, p. 1104; Bancroft, California, Vol. 7, p. 567; Am. R.R. Gazette, Vol. I, p. 462; Daggett, Southern Pacific, pp. 65-70.
sociates desired to dispose of their holdines in the company; the sale was made difficult, because other people also knew the condition of the road, and were not eager to buy. The deciding factor in the situation was the growing realization on the part of the associates of the possibility of securing a monoply of California railroad transportation. With such a control and the possibility of monoply prices, it was felt that even the Central Pacific, overburdened with debts as it was, could make a profit.

During 1868 the Central Pacific men were looking for available routes from Sacramento to the sea. Partly by luck, partly through railroad enthusiasm, and partly through the influence of Stanford, complete control was acquired over the Oakland water front - that is to say, the Central Pacific received half of the land in its own right, while it controlled a large block of the stock of the Oakland Waterfront Company, which con59 trolled the remeinder. In the same year, again lergely through the influence of Governor Stanford, it secured an entrance into San Francisco, and water front facilities which were almost a 60 monopoly.

The road from Sacramento to San Francisco was built by

60. Daggett, Southern Pacific, pp. 94-103.
three companies; from Sacramento to San Jose it was built by the San Francisco and San Jose Railroad, which let its contracts to the Western Pacific. The Western Pacific assigned its contracts in turn to the Contract and Finance Company, and in this way the Central Pacific secured control of the road. The remainder of the line was secured in 1868 from the San Francisco and Oakland and the San Francisco and Llameda, and the entire line wos com61 pleted in 1869 .

The Central Pacific as it appeared in 1873 was built up by a series of consolidations during the latter sixties and early 62 seventies, -

Several other lines were either built or acquired before
1873. The California Pacific had a direct line from Sacremento to San Francisco, and by reason of this shorter line wos able to 63 get a large proportion of the local business. By the threat of building a competing line, and by other more questionable means, 64 the Central Pacific secured control in 1871. By this trans-

action the main line was included in the Central Pacific system, but the branches were not added until a formal lease took place 65 in 1876.

The California and Oregon Railroad was the California part of a line from Sacramento to Portland. Having received a government land grant, it was acquired by the men interested in 66
the Central Pacific and consolidated with that line in 1870. It 67
was completed to Redding before the end of 1872.
The Southern Pacific Railroad of California was projected 68 in order to stop competition in southern California. Between 1866 and 1871 Congress chartered several transcontinental railroads with termini on the Pacific coast, and the Southern Pacific of California was built in large part to prevent the completion of these lines. The Central Pacific and the Southern Pacific of California were united by a community of ovmership, and furnished the basis of the later Southern Pacific system. By 1873 the main line of the Southern Pacific had been completed as far as Delano (one hundred and eighty-eight miles), and the coast division as far as Soledada (one hundred and forty-three miles).

By the control of these lines the Central Pacific had

Failroad Construction- transcontirental lires- to 187 .

Chapter IV. The Granger Period (1865-1875).

The most noticeable characteristics of the period from the Civil War to the panic of 1873 were; the extension of trunk lines across the first tier of trans-Mississippi states, the rapid building of feeders to these lines, the completion of north and south roads, and the beginning of the transcontinental lines. The first transcontinental road was completed during the period, but is in no way typical. It was built almost entirely by the help of governnent aid, and is an exotic product.

The building of feeder lines may largely be taken for granted. The ordinary process of railroad advance was the building of trunk lines and then the subsequent construction of subsidiary rads in order to fill local transportation needs and to draw the business that would make the through line profitable. It may then be taken for granted that in productive sections of the country a larger number of feeder lines came into existence shortly after the completion of the through routes. Part of these were built by local inistiative and remained independent, part were built locally and then absorbed by some larger line, and part were built directly by the railroad which they served. Each road was usually chartered separately, due to the limitations of any particular incorporation, but as long as the work was undertaken by one of the larger companies, it is unnecessary to treat the smaller company separately.

Minnesota's unfortunate experience of the latter fifties began to lose its effect in the early sixties, and from thattime on railroad construction continued to gather increasing momentum. The St. Paul and Pacific, eventually to become the Great Northern, was building north from St. Paul to a projected junction with the Northern Pacific at Brainerd, and northwest to form another transcontinental line. In 1866 the road was divided into two divisions 1 in order to facilitate construction, and by 1872 the northern line had been finished to Melrose, one hundred and eight miles, while the western line had reached Breckenridge, almost on the Dakota 3
boundary. The two divisions were re-united in 1871 and from then on continued as integral parts of the rood. An attempt was made to make this line a part of the Northern Pacific system in order to be used as a feeder and to give an entrance to St. Paul; the plan fell through because of the panic, which forced both roads into the hands of receivers. Eventually the Northern Pacific had to build its own parallel line.

Another line which was destined to become transcontinental
before 1900 was the Northern Pacific. The projected route was from Lake Simperior directly west to the coast. This had been Asa Whitney's plan, and especially recommended itself because of the lack of serious engineering problems, and because its northern

4. Minn. R.R.Comm. 1872, p. 8.
terminus made it advantageous in trade with the far east. The principal objection that was raised in the early fifties was that of climate, since it was maintained that the road could not be used the year around. The Union Pacific route was adopted by the government in preference to the northern route largely because of sectional differences; the central route served a larger proportion of the population more directly than could the northern line.

The most prominent exponent of the northern route during the early sixties was Josiah Perham. Originating the excursion idea, he was a firm believer in advertising, and of the desirability of large participation with small individual outlay. These ideas he carried into the business of railroad construction, and advocated a road aided by a government land grant, but being built by a million subscriptions of one hundred dollars each. He had originally favored the central route because it affected more people, but when the Union Pacific was chartered without his participation, he transferred his allegiance to the northern plan. After trying several schemes he finally chartered the Peoples Pacific Railroad in Maine, but before he could accomplish any7 thing definite, the idea had developed beyond him.
5. E. V. Smalley, History of the Northern Pacific Railroad (N.Y.,1883),p. 186.
6. See references in Chap. I.
7. For an account of the history of the Perham movement see Snalley, Northern Pacific, pp. 94-llo,Holmes, Minnesota, pp. 361 ff ., and Compendium of History and Biography of North Dakota (Chi., 1900), pp. $13 \overline{\mathrm{ff}}$.

At the same tine (1864) that the Union Pacific-Central Pacific road received an additional subsidy, the Northern Pacific was chartered by Congress and given a land grant. The Perham people were included among the original incorporators, but were outnumbered and soon lost in the larger movement. Perham was 9 the first president of the company, but was unable to secure the funds to start work, thus necessitating other plans, In 1867 several of the leading railroad men of the country made subscriptions in order to get the route surveyed, and in the same year the Perham group sold out their interests and retired.

The road having been surveyed in 1867 and 1868, it next became necessary to raise funds for its construction, and for this purpose an appeal was made to Jay Cooke to act as financial 11
agent. After considering this and several other offers for some time, he accepted, taking hold of the road in 1869. The firm of Jay Cooke and Company was the best known and most trusted of the financial houses of the period, and the participation of Cooke seemed to guarantee the road's early completion. Early in 1870

11. The connection of Jay Cooke with the Northern Pacific is best told in E.P. Oberholtzen, Jay Cooke Financeer of the Civil War ( 2 vols., Phila., 1907), Vol. l, pp. 98-262; a good account is also given in Smalley, Nortnern Pacific, pp. 170 ff .
111.

12
the first dirt was thrown, and by 1873 the line was complete to Bismarck, Dakota, a distance of four hundred and fity miles from 13
Duluth. The Lake Superior and Mississippi was leased in order 14 to give the road a connection between Duluth and St. Paul, while an agreement with the St. Paul and Pacific promised a more direct connection with St. Paul.

The method used for financing the road need not be given 15 in detail. The principal defect was that the securities of the company were disposed of at any price they would bring, no matter how low, in order to get the funds for the completion of the road. With this idea the bonds were sold at eighty-eight, and the stock was given as a bonus. Such a system was bound to produce a capitalization which in time would make the road topheavy. Attempts to sell the bonds in Europe were defeated by the outbreak of the war of 1870, and the home market was soon glutted. The inevitable result was the failure of the house of Jay Cooke, and the complete collapse of the Northern Pacific; construction stopped, 16 and the connecting lines were lost.

The Minnesota Valley Railroad was also connected with the

Northern Pacific scheme. In 1869 it was divided into the St. Paul and Sioux City and the Sioux City and St. Paul, the first company to build the Linnesota part of the line, and the second 17
company to build the Iowa part. During 1870 a scheme was put on foot to lease the whole line to the Lake Superior and Mississippi, thus making a direct connection between the Northern Pacif18
ic and the Union Pacific. The lease was made, bu the scheme 19
fell through because of the panic. The entire line from St. 20
Paul to Sioux City was opened in 1872. Technically the line was operated by two independent railroad companies, but actually both companies were controlled by the same men. This situation was relieved in 1878, when the two roads were consolidated under 22
the name of the St. Paul and Sioux City.
The Lake Superior and Lississippi has already been mentioned in connection with the Northern Pacific. Chartered in 23
1857 as the Nebraska and Lake Superior, the name was changed in 24 25
1861, and the road built between 1867 and 1870. It was leased to the Northern Pacific, but the lease terminated in 1874 upon the failure of the leasing road to meet its obligations. After

struggling along for several years it was foreclosed in 1877 , 27 and reorganized as the St. Paul and Duluth.

The roads which are ineradicably connected with the early seventies are the so-called "Granger" lines, particularly the Chicago and Northwestern, the Chicago, Milwaukee and St. Paul, the Chicago, Burlington and Guincy, the Missouri Pacific, the Chicago, Rock Island and Pacific, and the Wabash. These roads were nearly all Chicago concerns, and between themselves controlled the tericitory of southern Minnesota, Iowa, and Missouri. During the period under consideration these companies finished their main lines across the first tier of states, thus opening direct cominnication between the Missouri river town and Chicago. In tinis process of expansion they absorbed many roads which had been begun previously by local capital. The ensuing change of conditions produced a corresponding change of point of view on the part of the population of the country which the roads traversed. The people began to view transportation as the product of a foreign corporation rather than of home energy, and this changing point of view is one of the most striking characteristics of the " Granger period."

Between 1865 and 1873 the Chicago and Northwestern conpletes two main lines, one in Minnesota and the other in Iowa. The Iowa line was composed of the Chicago, Iowa and Nebraska from Clinton to Cedar Rapids, and the Cedar Råids and lifissouri
27. Tinn. R.R. Comm. 1886, p. 389; Ramsey County, p. 347; Holmes, Minnesota, Vol. 4, p. 357.

River from Cedar Rapids to Omaha. The original acquisition of both lines took place in 1862 , and by 1867 a junction was made 28
with the Union Pacific at Omaha. Des Moines was entered by 29 means of the control of the Des Lfoines and Kinnesota. The road was extended westward by the Sioux City and Pacific, which built 30
fron Missouri Valley to Sioux City and Wisner before 1873. This company was subsidiary to the Chicago and Northwestern through practically its entire history, although it was not included spe31 cifically in the system until the eighties. The Minnesota line was built by the Winona and St. Peter, and ran almost due west from Winona. It became a part of the Northwestern system in the early seventies, and was completed to Lake Kampeska, Dakota, during l873, being the only line to build in minnesota during 33 that year.

The main line of the Chicago, Milwaukee and St. Paul in Iowa was built by the McGregor Western, and ran directly west from McGregor. The road had been acquired in 1864, but was not built, and consequently its land grant was declared forfeited, 35 and transferred to the IfcGregor and Sioux City, which in turn was bought by the C. II. and St. P.. By 1873 the line was complete Chap. 2.

to Algona, about two-thirds the wey across the state. The most important increase of mileage of the C. M. and St. P. before 1873 was the acuisition of north and south lines to furmish connections with St. Paul. The Finnesota Central was built directly south from St. Paul through Faribault and Austin, being completed to a junction with the McGregor Western in 1867, and furnishing 37 the first all-rail route from St. Paul to Chicago. In the same year that it was completed it was sold to the RicGregor Western, 33 wisich in turn was sold to the Ifilwakee and St. Paul. The second St. Paul connection was made through the St. Paul and Chicago, 39
which was completed from St. Paul to Winona in 1871, and acquired 40
by the $C . \mathbb{M}$. and St. Paul the same year. The following year it was completed to La Crescent, thus making connections with the 41
main line to Chicago. The Southern Minnesota, running directly west from La Crosse, was the logical continuation of the "St. Paul" main line in southern Minnesota. By 1873 it had been built as 42
far west as Winnebago (one hundred and seventy miles), but it did not come under the control of the Chicago, Milweukee and St. Paul 43
until several years later. In the same way the Davenport and

St. Paul built northwest from Davenport toward the Chicago, Milwaukee and St. Paul main line. The road was nearly completed 44 by 1873, but the panic stopped the final work until the latter 45 seventies.

The Chicago, Burlington and Quincy constructed its western line under the name of the Burlington and Kissouri River, a road which was leased to the parent company. Burlington and Missouri River of Iowa was finished to Council Bluffs near the end of 1869, in time to reap the benefits of the newly opened 46 Union Pacific. In the following year a branch was opened to Nebraska City, and the Burlington and Lissouri River Reilroad of 47
Nebraska started to build west from Pacific Junction. By 1873 it had reached Ft. Kearney on the Union Pacific, four hundred 48 and seventy miles from Burlington.

James F. Joy of Detroit vas the controlling genius of the Chicago, Burlington and Quincy during the latter sixties and early seventies, and was one of the first men to make a stert at building up a western railroed empire. Starting with the C. B. and Q. main line, he continued it to Kearney under the name of the Burlington and Missouri River. Then he secured control of the Hannibel and St. Joseph, which had its eastern terminus on

the C. B. and Q. mein line at Juincy. To connect the western termini of the roads he completed the Kansas City, St. Joseph, 50 and Council Bluffs by 1870, also adding branches of the Hannibal 51 and St. Joseph to Atchison end Kansas City. Thus he had two connected through lines, completely controling southern Iowa and Forthern Nissouri, and making transcontinential connections. Joy's further plan was to build south from Kansas City to the Gulf, end for this purpose he secured the تissouri River, Ft. Scott and Gulf, 53
completing it to Baxter Springs by 1870, and the Leavenworth, Law54 rence and Galveston, which he completed to the southern boundary 55
of Kanses by 1873. The early seventies found the Joy roads ereatly overbuilt, so that the panic and the resulting depression caused a complete breakdown of the system. In particular, the roods building toward the Gulf were lost, and the idea of a Gulf connection was never seriously revived by the "Burlireton" lines.

The Chicago, Rock Island and Pacific main line was built across Iowa under the name of the Mississippi and Missouri, and 56 was completed from Davenoort to Omaha in 1869. This subsidiary

line had Elways been in close connection with the original Chicago and Rock Island Railroad, end in 1866 a new company - the Chicago, Rock Island and Pacific was formed in Iowa, end bought both roads, so that they fost their independent corporate exist57 ence. Immediately after the completion of the main line across Iowa the Chicago and Southwestern was begun in order to furnish a direct line from Wilton (a little west of Davenport) to Leavenworth. By 1873 this line was complete, with a branch to Atchison, so that the Chicaco, Rock Island and Pacific had in reality 58
two main lines to tap the western territory.
The building of the Des Lioines Valley Railroad has already been described, August 29, 1866,it completed its main line from Keokuk to Des hioines, being the first railroad to enter the latter巨9
city. Construction was continued northwest, and the road reached Ft. Dodge by 1873. The finances of the company had never been 61
in a very satisfactory condition, and when the panic came the 62
road was foreclosed. When it was reorganized it was divided into two separate companies - the Keokuk and Des Moines and the Des 63
Noines and Ft. Dodge. The first of these lines was leased to 64 the Chicago, Rock Island and Pacific in 1878.

The future main line of the Illinois Central was started by the Dubuque and Sioux City; it was completed to Iowa Falls in 65 1867, and leased to the Illinois Central the same year. Upon the failure to complete the line, its land grant was declared 66 forfeited and regranted to the Iowa Falls and Sioux City. This 67 second line was immediately acquired by the Illinois Central, and 68 in 1870 was completed across the state.

The Missouri Pacific was completed to Kansas City in 69
1865; in 1866 it reached Leavenworth, and shortly later con70
structed a branch to Atchison. At this point it became involved with the Southwest Branch, which had originally been projected as subsidiary to the main line. By 1860 the Southwest Eranch had been built from Pacific Junction to Rolla (one hundred and eleven miles), where it remoined until after the war. It was foreclosed by the state in 1860 and sold to J. C. Fremont, who in turn conveyed it to the South Pacific Railroad Company, char71
tered in the same year. In July 1866 the Atlantic and Pacific was chartered by Congress, and given a land grant along the line of the former Southwest Branch and the thirty-fifth parallel to

72
73
the coast; J. C. Fremont was president of this new company. The 74
South Pacific built as far as Little Piney, and was then boucht 75 by the Atlantic and Pacific, which completed the road to Vinita, Indian Territory, to a junction with the Missouri, Kansas and Tex76
as. The foundation of a large railroad system was laid when the Atlantic and Pacific leased the Missouri Pacific in 1872, - but the occurrence of the panic in the following year caused the two 78 roads to again separate.

The most southern project for making transcontinental connections with the ITissouri Pacific was by means of the St. Louis and Iron Mountain. This road was foreclosed by the state in 1867 and bought by Thomas Allen, who had been the prime mover of the Pacific Railroad of Lissouri. By 1872 the road had been 79 finished to Moark, on the state line. The southern connection lay through the Cairo and Fulton, also controlled by illen, which was building through frkensas to a connection with a proposed transcontinental line starting at Texarkana. The whole line to Texarkena was complete in 1873, and in 1874 the two roads were 80 consolidated as the St. Louis, Iron Nountain and Southern. Although much of the stock of the Missouri and the St. Louis, Iron

Yountain and Southern were held in conmon, the two roads were not 81 formally made a part of the same system until the early eighties.

During the period from 1865 to 1873 the lines which were later to become the Wabash took definite shope. The North Mis82
souri was reorganized in 1867 and by 1869 had completed its line 83
from Moberly to Kanses City; the following year its northern ex84
tension was completed to Ottumwa, Iowa. The road went bankrupt 85
in 1871 and was reorganized in 1872 as the St. Louis, Kansas City 86 and Northern. This company was one of the constituent parts of the Wabash, St. Louis and Pacific, formed by consolidation in 87 1879.

These roads comprise what is generally termed the "Granger lines". All but the Missouri Pacific centered in Chicego. With practically no exceptions they had acquired and completed their trunk lines across the first tier of trans-2ississippi states between 1865 and 1873. The exceptions were the Chicago, Milwaukee and St. Paul, which had gotten only about half way across Iowa and liinnesota, and the Wabash, vihich was formed later, - although its future main line was constructed during the period under consideration. Probably the most active system was the Chicaco, Bur-

lington and Euincy, which under the leadership of Joy had pushed half way across Nebraska, and had acquired branches with projected lines to the Gulf.

A few of the independent roads to build before 1873 may be noted briefly. The Burlington, Cedar Rapids and Northern, 2 consolidation (1868) of the Cedar Rapids and Burlington and the 88
Cedar Rapids and St. Paul, was completed to Plynouth, two hundred 89 and twenty miles north of Burlington. The Central Railroad of Iowa, another north and south road, after having gone through 90
nurerous chenges, was finally completed from Albion to Northwood 91 (three hundred and fourteen miles) by 1873. In Arkansen, the 92 Memphis and Little Rock was finally completed in 1871, while its western extension, the Little Rock and Ft. Smith, was completed to Clarksville, a distance of one hundred miles.

The majority of Texas railroad construction before 1873 was toward the north to make through connections with the northern lines - particularly the Missouri, Kansas and Texas, end the St. Louis, Iron Nountain and Southern. The Houston and Texas Central was the first line to start a construction after the Civil

94
War, and built continuously from 1866 to 1873 , during which time it reached Denison on the Red River, thus making connection with the missouri, Kansas and Texas. It also completed brenches to 95
Austin and Waco.
The International and Great Northern was the only other texas line to make north and south connections by 1873. The Houston and Great Northern was chartered in 1866 to run north 96
from Houston. It started building in 1871, and in the two succeeding years was completed to Palestine (one hundred and fifty97 one miles), and absorbed the Houston Tap and Brazoria. The International Railroad was chartered in 1870 to run from the Red 98
River near Fulton southwest to San Antonio and Laredo, and was given special aid by the legislature of Texas to the extent of 99
$\$ 10,000$ per mile. Building was started in 1871 at Hearne, on 100 the Houston and Texas Central, and by 1872 the road had been completed through Palestine to Longview Junction on the Texas and 101
Pacific. In 1873 the Houston and Great Northern and the International were consolidated into the International and Great North-

101. Hardy and Roberts, p. 201.
ern, with Calusha A. Grow as president. The new line ran from Houston north to a junction with the Texas and Pacific, which in turn connected with the St. Louis, Iron Fountain and Southern, thus making a complete route directly to St. Louis; it also had a line from Palestine to Hearne, on the Houston and Texas Central.

The Texas and Pacific was the final form of the plan for building a trenscontinental railraod along the thirty-third parallel. Various other companies had been chartered by the state of Texas for this purpose, and had been given extensive aid in land. The Mississippi and Pacific, chartered in 1853, was given the 103
first chance, but did nothing. The Nemphis, El Paso and Pacific next succeeded to the grant, but after a vigorous campaign for 104
funds, found itself unable to build. The Southern Transconti105
nental also had a chance and failed. The Southern Pacific of Texas actually built from Shreveport, Louisiana, to Marshall, 106
Texas,in 1866. In 1868 it added the Vicksburg, Shreveport and 107
Texas, and by 1870 was in operation to Longview, the terminus of 108
the International Railroad. At this point construction stopped,

and apparently the effort had come to an end.
The federal government took a hand in 1871, and chartered the Texas and Pacific to run from Narshall, Texas, via El Paso to the Pacific Coast at San Diego. The land erant given by the United States was supplemented by an additional grant from the state of Texas. Under the leadership of Thomas Scott, the Texas and Pacific immediately purchased its possible rivals - the Southern Pacific, the Southern Transcontinental, and the Kemphis, El Faso and Pacific. The old line of the Southern Pacific was completed to Dallas in 1873 and to Ft. Worth in 1876. The WarshallTexarkana line was completed in 1873, thus furnishing the final link of the through route from St. Louis to Houston via the St. Louis, Iron Nountain and Southern and the International and Great 109 Northern.

The only other Texas road to begin any significant raifroad construction before 1873 was the old Buffalo Bayou, Brazos and Colorado. The original company was succeeded in 1870 by the Galveston, Harrisburg and San Antonio, incorporated to extend the scope of the charter and to allow construction $\nabla i a \operatorname{San}$ Antonio to 110
the Rio Grande. Work was started in earnest in 1873 and from that time the road was pushed vicorously until it finally made 111
connections with the Southern Pacific.
109. These operations are surmarized very briefly and correctly in Poor's Manual 1878, p. 859; see also Tex. R.R. Comm. 1897, p. 237. The laws for state aid are given in Sayle's Tex. Civil Statutes, pp. 1939-1944.
110. Tex. R.R. Comm. 1897, p. 182.
111. Hardy and Roberts, p. 201.

Two of the main north and south lines have already been mentioned- the St. Louis, Iron Mountain and Southern, which had been completed to Texarkana by 1873, and the INissouri River, Ft. Scott and Gulf, which had reached the southern boundary of Kansas by the same date. The Union Pacific- Southern Branch had been given a land grant in the Kansas Act of 1863 - running from a point on the Santa Fe where it crosses the Neosho river south to the boundary of the state to a junction with the Leavenworth, 112 Lawrence and Galveston. Provision was made that the first road to reach Indian Territory in the Neosho Valley should have the right of way to Texas. Construction was started in 186 E at 113
Junction City, Kansas, on the Kansas Pacific, and was pushed as fast as possible in order to get to the southern boundary of the state before the Missouri River, Ft. Scott and Gulf arrived there. The Wissouri River, Ft. Scott and Gulf won the race, but it built so far west that it did not come under the terms of the grant, and consequently the Southern Brinch got the right of way to Tex114 as. The Union Pacific - Southern Branch was consolidated and April, 1870, with three branch lines to form the Nissouri, Kan115 sas end Texas, and in June was completed to the southern boundary

of Kanses. Construction was continued, and late in 1872 the road reached the Red River, operating its first train to Denison 116
on January l, 1873. The road was also completed during the early seventies from Hannibal, Missouri, to a junction with the main line 117
at Parsons, Kansas. This branch gave connections with the Missouri Pacific and the Hannibal and St. Jo.

The first great impetus toward the development of the railroad net in the second tier of trens-Ifississippi states came in the latter sixties and early seventies. The St. Joseph and Denver City may be taken as a typical example. Starting as a local enterprise in the latter fifties, it built from opposite St. Joseph (as the terminal of the Hannibal and St. Jo.) to Wathena in 1860. In 1862 it becsme the St. Joseph and Denver 118 City, and in 1866 received a Congressional land grant. In the same year it was reorganized and consolidated with the worthern Kansas Railroad and Telegraph Company and started further con119
struction, so that by 1872 it had been completed from St. Joseph 120
to Hastings, Nebraska.

The Union Pacific act of 1862, besides providing for a main line, had al so made provision for several branches. The ones from Sioux City and from St. Joseph have already been mentioned. A third was a line from Kansas City to a connection with the Union Pacific near the looth meridian. This portion went to the Leavenworth, Pawnee and Western, chertered in 1855. and which changed its name to the Union Pacific - Eastern Division 122
at this time. Construction was begun in 1863, and by 1864 the 123
road was opened to Lawrence. Work progressed slowly because of the war, and in 1866 the time for completion was extended and the route changed so that connection could be made with the Union 124 Pacific at a point not more then fifty miles west of Denver. Construction continued consistently from this time, and in January, 1867 a large excusrion party, headed by Simon Cameron, was 125 taken over the line as far as Ft. Harker, Kansas. By the statute of March 3, 1869, the name of the road was changed to the Kansas Pacific, and the western part of the line was assiened to the 126
Denver Pacific Railway and Telegragh Company. The entire Kansas

City-Denver line was opened in 1870.
The Denver Pacific was chartered in 1867 to build from Denver to a junction with the Union Pacific. Arrangements were made with the Union Pacific to build the road, but the Union Pacific was unable to fulfill the terms because of its financial embarrassment, and the contract was turned over to the Kansas 129
Pacific. The Kanses Pacific completed its own line to Denver and the Denver Pacific to Cheyenne, securing control of the latter 130 road. Thus there was formed a parallel and competing line to the Union Pacific, which by the terms of the original Pacific railroad act had to be given fair treatment. This situation was later utilized by Gould in his attempt to control the Union Pacific.

The third line to build across the second tier of states was the Atchison, Topeka and Santa Fe, which in large part was the outgrowth of the dreams of Cyrus Holliday in the latter fif131 ties.

The original project was embraced in the charter of the Atchison and Topeka (1859), which provided for a road from Atchison to Topeka and then west in the direction of Santa Fe, and a

branch south toward the Gulf. Both the main line and the branch were aided in 1863 in the Congressional land grant to Kansas. The main line wes given to the Atchison and Topeka, reorénized as the Atchison, Topeka and Sinta Fe , while the southern branch went to an independent company - the Leavenworth, Lewrence and Galveston (originally the Leavenworth, Lawrence and Ft. Gibson). The branch was accuired by the Joy interests and was completed by them to the state boundary by 1873, although it was leter 134 added to the main line.

The Atchison, Topeka and Santa Fe itself did not imnediately fulfill the great expectations which it had engendered. In 1864 it was aided by a state act allowing county subscriptions, and the same year Holliday went to New York to try to enlist eastern capital. The war prevented any effective assistance, and it was 1868 before it was possible to stert construction. A contrect to build the entire Kansas line had been made in 1867, but 136
nothing was done. In 1858 the contract was assiened to T. J. Peters of Cincinatti, who was also a heavy stockholder, and provision was made that part of the payment should be made in stock

137
and bonds. Owing to tinis arrangement the control gradually pissed from the hands of the western originators, and by 1869 had become centered in a group of New England financiers; Henry 138 Keyes of Newbury, Vermont, became president in that year.

Construction progressed steadily after 1868; by 1872 the 139
road had reached the state line, and in 1873 was completed to 140
Granada, Colorado. In the same year Henry Strong became presi141
dent. The Santa Fe was particularly fortunate in securing traffic; with good terminal facilities, it secured a large share of 142 the cattle trade, and was able to pay dividends as early as 1879. This cattle trade centered at Dodge City, five miles from Fort Dodge, and made that town one of the best known cattle centers of the west. The Santa Fe also was able to build a branch to Wich143
ita by 1873, and in sharp contrast to the vast majority of western roads, was able to continue construction in the years immediately after the panic of 1873.

Two other scenes of railroad endeavor must be noted before the picture is complete. The first of these was Colorado,

Which had been a very agressive communty from the time of its first great increase of population in the late fifties. Denver in particular was very active. It failed to get the Union Pacific to build through the city, but succeeded in getting the Denver Pacific, and by means of the Kansas Pacific-Denver Pacific line had direct communication with the east as well as a connection with the main line of the Union Pacific. Then the santa Fe started to build, and by 1870 it had become evident that the line would be completed through southern Colorado, entirely missing Denver. To at least minimize this misfortune, local enterprise started several railroad projects, all having a comnon center at Denver. The most important of these was the Denver and Rio Grande, organized in 1870 to build south from Denver toward Senta 144 Ee to head off the Atchison road. Gen. W. J. Palmer was the moving spirit, and construction was started im ediately, mostly on 145
the basis of Philadelphia capital. By 1873 this narrow-gauge 146
road had gotten as far south as Pueblo, and the next year it 147
started its western extension from that city. Unfortunately, its financial backing was none too strong, and during the years of financial depression that followed, the Santa Fe was able to build more rapidly, and to secure control of the situation.

The otner center of railroad construction was the inormon setilement in Utah. The iormons had exerted every possible influence in order to have the Union Pacific built through Salt Lake City, but when it became certain that it would not strike that 148
place the utah Central was organized, being opened from Salt Lake 149
City to Ogden early in 1870. The Utah Northern and the Utah 150 Southern were organized in 1871, and the Utah and Nevada in 1872. In all these enterprises, amounts varying from twenty to sixty miles were built by 1873. They were all backed by the Mormons, and headed by Brigham Young. The idea was not to make a railroad system complete in itself, or even to do any extensive building, but only to furnish the Mormon communities with transporta152
tion facilities. This purpose being accomplished, the roads were all sold to the Union Pacific within ten years. The practical experience for their building was acquired through the Union Pacific. Brigham Young and other n . contracts on the union Pacific, end had thus secured the experience which later enabled them to build their own lines successful1y.

The immediate result of the railroad building just subse uent to the Civil War was unrestricted and ruinous competition, particularly in the case of the through lines from Chicago to the Eissouri River towns. As yet there was little competition for local traffic, but the through business from Chicaeo to Onaha was the occasion of much rivalry. Dy the end of the sixties conditions had become so bad that a change was absolutely necessary, and consequently the three through lines between these points the Chicago, Burlington and Quincy, the Chicago and Northwestern, and the Chicago, Rock Island and Pecific came to an understending known as the "Iowa Pool". Iy this asceement the rates between Chicago and Omeha on the three lines were made the same, fortyfive per cent of the passenger and fifty per cent of the freight earnings were allowed for operating expenses, and the remaining receipts were divided evenly between the companies concerned. The division worked equitably to the roads, was generally supported by the sentiment of the country at the time, and continued in operation for over fifteen years.

Another phase of the Chicago-inissouri River trouble was the cattle trade. In the latter sixties as this business increased in importance, the competition between the roads catering to it became more prevalent. To meet the situation, rep-
153. Tullidge, Salt Lake City, p. 7ll; Winitney, Utah, Vol. 2, p. 244; Bancroft, Utah, p. 754.
154. 57 th Cong., 1 lst Sess., House Document 380, p.333; Ia. R.R. Conv., 1878, pp. 48-49.
resentetives of the various interested rosds met at St. Louis in 1871 and fixed the rates for cattle from various points in Nissouri and Kensas. In attempt was made to put the roads on an equal footing, end various towns such as Seneca, Baxter Jprings, Chetopa and Abilene were given a flat rate of one hundred and fif155 teen dollars per car to Chicago.

During this period there was no stendard time in use, and the necessity for some agreement as to train connections, etc., was in additional influence in bringing the railroads together. The first recorded meeting on the question of time was held at 156 St. Louis in l872, with twenty-three railroads represented. Ifter 1874 the meetings became regular, and eventually led to the adoption of a standard time for the entire country.

While the period to 1873 is characterized by the becinnings of western railroad cooperation, it is also strongly marked by a changed attitude on the part of the population of the west. The earlier generation that had supported railroads enthusiastically was giving place to a new generation reised under difierent conditions. The trunk line expansion hed been carried forward by means of the acquisition of local roads, which could ordinarily be secured because local cenital proved insuificient for their completion. This condition proved to be the opportunity for the
155. R.R. Gazette, Vol. 3,p. 70. Ringwalt, p. 273, describes the "cattle evener's pool" of 1875 to distribute this trade equitable over the eastern trunk lines. 57 th Cone., lst Sess., House Doc. 350, pp. 336-337, and Ringwalt, pp. 276-278, gives a list of pools that were formed.

- 156. Proceedincs of the General Time Convention and its Successor the American Railway Association, Vol. 1, p. 681.
larger Chicago roads to secure control, end instead of companies headed by local men, the people found themselves confronted more and more by foreign corporations. Most of these rapidly expanding roads were unable to pay dividends, and the lack of profits mede local stock payments almost impossible to meet. Consequently many of the local holders sold their stock or bonds at a low figure. This process was hastened by numerous cases of reorganization and foreclosure, which ordinarily had the result of sciueezing out the small stockholders. Consecuently, instead of locally owned and operated roads, there was a change to foreign . corporation control, and a corresponding chance in viewpoint on the part of the people that lived in the territory through which the roads passed.

The changing control of the railroads brought into additional proninence the question of rates. Ifost western railroads were over-capitalized, because their securities had to be sold below par - very frequently the stock being given as a bonus on the bonds, Over-capitelizetion added to over-building made it necessary for them to have as larce receipts es possible, and led to high rates, pools, and rate agreements. As a result the western farmer, instead of finding the railroads a panacea for cll economics ills, w:s presented with high rates, railroad consolidation, and foreign control. The panic of 1873 and the ensuing depression was heichtened by several years of bad crops, and the result was an entire change of viewpoint.

The foregoing factors present only one possible outcone -anti-railroad feelirg, with attending attempts at legislative regulation. The agitation had its center in Illinois, was perticulerly strong in Wisconsin, Minnesota, Iowa and Missouri, and reached all of the west in some form or other during the first hilf of the seventies. It is best marked by the railroad com157 $158 \quad 159$
mission laws of Vinnesota, 1871 and 1874, Vissouri 1875, Cali160161 fornia 1876, and Iowa 1878, and by the anti-railroad provisions 162 of the constitutions made during the period - Arkansas 1874, 163164165166 Missouri 1875, Nebraksa, 1875, Colorado 1876, Texas 1876, and 167
California 1879. The California law of 1876 proved to be a farce. The Iowa law of 1878 was really only an addition to the 168 law of 1874, which provided for meximum rates. These cases showed the first real series of attempts to control the railroads.

The details of the anti-railroad movement, with its at169 tendent laws, are not within the realms of this study. The results were negligible as far as railroad construction was concerned. Although the railroads pleaded that the rates established by comissions having such power (as in Minnesota and Missouri), were so low as to be confiscatory, no such result is observable. Quite generally the railroads continued building until about 1872 or 1873, and then found themselves in such financial straits that further work proved impossible for several years. Normal economic causes, rather than anti-railroad legislation, were back of the depression of the midale seventies. The anti-railroad agitation came into contact with the central government in the legislative and judicial departments. The railroads appealed to the courts against this western state lefislation, which they claimed was unconstitutional, and in 1876 the Supreme Court decided that the "Granger" laws were val170 id. The matter of national regulation was brought before Congress in the Windom report of 1874 and in the Reagan report of 1878. The Vindom report advocated the prohibition of the consclidation of competing lines, an advisory Bureau of Commerce, and the building by the United States of several trunk lines for
169. Buck, Grenger Movement is the standard work on the subject, and presents en excellent detailed account of the agitation and its effect, particularly in Illinois, Wisconsin, linaesota, Iowa and Missouri.

171
reculatory purposes. The Reagan renort advocated a prohibition of personal discrimination, rebates, combinations of any kind, 172 and the adoption of a long and short haul clause. The attitude of Congress during the period was that the states be allowed to take care of the matter themselves, and in this view it was supported by the decision of the Supreme Court.

Chapter V. The Transcontinental Period (1873-1884).

The panic of 1873 brought railroad construction to almost a complete standstill, and for several years practically nothing was done. In the subsequent revival of the late seventies and early eighties the dominant note vas the completion of the transcontinental lines. Three entirely new lines were opened, and several other roads were built to some connection thet produced an almost entirely new line. By $1883-4$ the railroad map of the western half of the United States had become recognizable, and future construction consisted almost entirely of filling in the gaps. The imnediate result was the disappearance of the frontier, and in this work the new transcontinental roads were the greatest single fector.

The Central Pacific-Southern Pacific system was one of the most active during the period. . The dominating motive back of the men who controlled it was to monopolize the transportation system of California. From the time the Central Pacific completed its main line, this is the force that appers throughout all operations. The early seventies saw the Southern Pacific of California building south to forestall any local competition, and to prevent the construction of any future independent transcontinental lines throuch southern California. Construction was continued in the years immediately following the panic of 1873 ,
and by 1877 had reached Yuma, one of the two available crossings 1 of the Colorado River. At this point it came into conflict with the Texas and Pacific, uncier Colonel Scott, that had a charter from Congress for the whole distance from Marshall, Texas, via El Paso to the Pacific coast. The Yuma crossing was the only available route for the road if it hoped to finish a complete line, but at this time construction hed reached only to Ft. Worth, Texas, and consequently the company was in no position to wage a successful contest with the Southern Pacific. The Texas and Pacific was given permission in October, 1876, to break ground for a bridge over the Colorado river, but in the following month the order was revoked. In 1877 both roads were given permission to cross temporarily the Indian reservation, and under this provisional order the Southern Pacific, that was on the spot, succeeded in completing a permanent bridge and track, When the permission was later withdrawn, the stopping of train service called forth such a large amount of protest that Congress gave the Southern Pacific possession of the desired richt of way.

This contest over the possession of the one available crossing of the Colorado river was really only an echo of the

2. Location of Southern Pacitic and Texos Pacific Railroads. Letter from the Secretary of War concerning the locetion of the Southern Pacific end Texas Pacific Railroads through Fort Yuma reservation and across the Colorado River, in 45 th Cong., 2nd Sess., House Ex. DOC. $3 \overline{3}$ gives all the essential history of the case, including the order and correspondence of the War Department.
larger fight in Vashington. Scott was seeking a bond subsidy for the Texas and Pacific in order to make possible the completion of his road. The Southern Pacific people fought this measure, and offered to build the road without any subsidy. The chief argument that the Texas and Pacific group advanced was that the building of the Southern Pacific would produce a monoply of transcontinental comnunication in the hands of the Central Pacific men. To take away the appearance of monoply, the Southern Pacific was divorced from the Central Pacific as much as possible. Huntington resigned from the presidency of the Southern Pacific and D. D. Colton took his place. The Contract and Finance Company was dissolved because of its recognized connection with the Central Pacific, and the Western Development Company formed in its stead. Although the appearance of monoply was thus removed, actual conditions still remained the same - Colton was in close connection with the Central Pacific, the Western Development Company was composed of Stanford, Huntington, Crocker, Hopkins and Colton, and Funtington went east to buy supplies for both roads and to lobby at Washington. Huntington was able to block the effort of Scott to get aid from Congress, and at the same time the Southern Pacific secured a right of way from Arizona and New Mexico, and started building east. By this time Scott realized that his position was hopeless and sold out to Jay Cooke, who made an agreement with the Southern Pacific in 1881 which called for the completion of the Texas and Pacific to a junction et $E l$ Paso, and a future
division of treffic.
By 1880 the Southern Pacific had reached Deming, New 4
Mexico, and the following year the Santa Fe reached that point, 5 thus producing the second transcontinental line. The Texas and Pacific was constructed rapidly after Gould secured control, and in 1882 made connections with the Southern Pacific a short dis6
tance east of El Paso. In the following year the Galveston, Hzrrisburg, end San Antonio, which had been building west steadily during the seventies, came to a junction with the Southern 7 Pacific. Added to the Texas and New Orleans, the Louisiana Western, and Irorgan's Louisiana and Texas, these lines formed a com8 plete route from New Orleans to San Francisco. In 1883 all the lines composing this route were leased to the Southern Pacific of 9 California.

By the middle of the seventies the Central Pacific-Southern Pacific corabination was in control of ei $\begin{gathered}\text { hty-five per cent of }\end{gathered}$ the railroads of California, and held a monopoly of the state's transportation. From this time on the attempt was made either
3. Good accounts of this strucgle are given in 48 th Cong., lst Sess., House Rpt. 62, in Bancroft, California, Vol. 7 pp. 610-1, and in J. G. Dixon, The Construction of the Southern Pacific Railroad, ( U . of Wis., 1921), an K. thesis.

to forestall any railroad construction, or, if that failed, to drive the line out of business after it hed been built. Most of the Central Pacific roads were held by stock ownership, supplemented by a lease; the Southern Pacific Company was formed in 1884 to coordinate the system. A Kentucky corporation, it had practically unlimited powers except in the state of its formation, and leased the whole group of lines - the Central Pacific, the 10 Southern Pacific, the Houston, Harrisburg and San Antonio, etc. The only significant California railroad that was not included in the Southern Pacific system was the San Francisco and North Pacific, which had been built some ninety miles north from San Francis11 co before 1883.

Two transcontinental connections made by the Southern Pacific by 1883 have already been mentioned; the third was with the Atchison, Topeka, and Santa Fe. The Santa Fe was able to keep on building after the panic of 1873, and reached Pueblo in 12 1876. In 1877 Strong became vice-president and general manager, 13 and in 1881 president; under his control the road was pushed vigorously, and had its greaest period of expansion. 1878 found
10. A. Sutro, The People of Kentucky Disgraced (1894) contains a reprint of the law, and is a bitter arraignment of the whole system. Cal. R.R. Comm. 2885, pp. 44-46 also contains the law.
11. Traveler's Guide Jan. 1874, No. 485. Bancroft, California, Vol. 7, pp. 583-584, contains an account of the origin and building of the road. It had been completed to Cloverdale in 1873, and remeined there until the eighties.

13. Rehabiliation of the Santa re, p. 3.
the Santa Fe occupying the only good route from Colorado to New Mexico (the Raton pass) in advance of the Denver and Rio Grande, 14
and rapidly building south. In 1880 it was opened to Albuquerque, 15
with a branch to Santa Fe , and in 1881 connection was made with the Southern Pacific at Deming, New Nexico, thus forming the sec16
ond complete transcontinental line. Early in the eighties almost the entire road had to be re-ballasted and steel rails sub17 stituted for iron because of the heavy traffic.

The main Pacific connection of the Santa $F e$ was to be made over the Atlantic and Pacific. This line was a part of the St. Louis and San Francisco road, which was unable to build it. In order to aid both roads, an acreement was made in 1880 whereby the St. Louis and San Francisco was to use the tracks of the Santa Fe from Vichita (later Halstead) to Albuquerque, in return for which the Santa Fe was given half control of the Atlantic and Pacific; the Atlantic and Pacific was to be built west from Albuquercue to the coast, its bonds being disposed of in equal parts by the two 18 interested roads. Under this agreement work was started immediately. This situation threatened the Southern Pacific control of transcontinental traffic and its monopoly in California. Two

plans were used to meet the difficulty - the Southern Pacific constructed a branch from Nojave to the Needles, the only Eood crossing of the Colorado river besides Yuma, and Huntington and Gould (controlling the Texas and Pacific) bought control of the St. Louis and San Francisco. In this way the Santa Fe was bothered on all sides, and in 1882 agreed to give up its plan of completing 19
its own line to the coast. A junction with the Southern Facific 20 was made in 1883. Conditions changed in 1884 when the Atlantic and Pacific passed out of the hands of the Southern Pacific and was secured by the Santa Fe. With the threat of building its own line, the Santa Fe secured the purchase of the Mojave-Needles 21 line, and trackage rights to San Francisco.

The Santa Fe was never satisfied while dependent upon another road for through connections, and as early as 1879 the Sonora Railway Company was organized for a connection with the Gulf of California. In 1880 work was started at Guaynas on the Gulf of California and in 1881 at Benson, New Ifexico, which was reached by a traffic agreement secured through a threat to build. Progress was made very leisurely, because the Santa re expected toto make more direct coast connections via the Atlantic and Pacific. The trouble in 1882 over the Atlantic and Pecific resulted in hastening the work, and throuch connections were made in Octo-

ber or that year. Connection to Ifexico City was made over the Mexican Central, completed early in 1884. This line never did more than to tinreaten the Southern Pacific. What the Santa Fe really wanted was a direct line through California, and when it 22 was acquired the liexican line was sold.

Several other connections which the Santa Fe made during the period must be noted; in 1875 the Kanses City, Topeka and Western was leased, giving a direct line from Topeka to Kansas 23
City; after the break-up of the Joy lines, and gave a road to the southern boundary of Kansas; the Kansas City, Lawrence and 25 26 Southern, formed by consolidation, was acquired in 1880; Denver was entered in 1882 under a traffic agreement with the Denver and 27
Rio Grande; and a connection with San Diego was projected through the California Southern, chartered 1880, and the California South28 ern Extension, chartered 1881.

The road causing the Santa $F e$ the most trouble was the Denver and Rio Grande. Having been built as far as Pueblo before the panic of 1873, it was unable to carry on any very considerable construction until the latter seventies. In 1878 it

was beaten to Raton Pass by the Santa $F e$, and started building west from Cuchara Junction, south of Pueblo. By 1880 the line had been constructed west and south to Espanola, a short distance 29
north of Santa Fe. During these same years of the latter seventies the Rio Grande and the Santa Fe came to bitter conflict over the route from Pueblo to Leadville. Leadville was booning as a mining center, and the only practical approach was throuch a canon which permitted but one railroad line. The fight for the control of this line was waged in the internal organization of the companies, in rates, in the courts, and in actual conflict of construction crews. The details of the contest have been discussed frequently at considerable length under the title of the "Rio Grande Mar". The eventual outcome was that the Rio Grande people were 30 left in control of the pass, and consequently of the whole line.

When the Denver and Rio Grande saw the probable outcome of its fight with the Santa Fe, it began to mature more ambitious plans. It was proposed to continue the Leadville line to the Utah border, and there to make a junction with a Utah line from Ogden and Salt Lake City. For tlis purpose the Denver and Rio Grande Vestern was organized in Utan in 1880 and imnediately
29. Clear Creek and Boulder Valleys, p. 184; Hall, Colorado, Vol. 2, p. 391.
30. The most complete discussion is given in Bradley, Sante Fe pp. 155-203; see also Gleed, Santa Fe, p. 474, Hall, Colorado, Vol. 2, pp. 363-382, Vol. 3, p. Ill, and Smiley, Denver, p. 608 .

31
started building. The Colorado section of the line was completed 32 to Grand Junction in December of l882, while the entire line was finished in 5 arch, 1883, thus producing a new and independent route from Ogden to Pueblo and Denver, with eastern connections 33
via the Kansas Pacific or Santa Fe, ${ }_{34}$ The western division was leased by the original line in l882, and although it was separated 35 in 1884, and changed its name to the Rio Grande Western in 1889, it remained an integral part of the Rio Grande system through a comaunity of ownership.

The Union Pacific began to revive during the latter seventies and may be spoken of in this connection because it also completed a new transcontinental link during the period. After Scott's attempt at control in the early seventies, Jay Gould became interested in the road, buying a large block of stock in 1873. The largest liability which the Union Pacific had was its debt to the government, and Gould turned his first attention to 37 that, trying to have a sinking fund established by law. The effort failed at this time, and not until 1878, under the Thurman
31. Tullidee, Salt Lake City, p. 722. The road was organized by consolidation.
32. Hall, Colorado, Vol. 2, p. 391; Traveler's Guide June 1883, p. 250.
33. Whitney, Utah, Vol. 3, p. 250; Traveler's Guide June 1883, p. 250.

37. Dodge, Union Pacific, p. 33.

Act, was such was such provision made. In the mean time, the road stopped trying to meet its obligations to the government, and turned toward a policy of vigorous consolidation and expansion.

The first attempt of the Union Pacific toward consolidation was very naturally in the direction of its most serious rival - the Denver Pacific - Kansas Pacific line. After a fruit39
less attempt to either consolidate or purchase, the Union Pacific 40
built a parallel road to Denver. By this time Gould saw the practical significane of the Denver Pacific-Kansas Pacific system, and in 1878 sold out most of his Union Pacific stock and bought 41
control of the Kansas Pacific and the Denver Pacific. In 1879 there was an attempt to consolidate these three roads on the basis of an equal exchange of securities, but the Union Pacific 42 people backed out because of a desire for better terms. Gould immediately went west and bought a controlling interest in the Lisisouri Pacific, the Kansas Central (parallel to the Kansas Pacific), and the Central Branch of the Union Pacific. With the threat of completing another line to the coast, Gould was able to dictate his own terms, and to secure the consolidation of the Union Pacific, The Denver Pacific, and the Kansas Pacific in 1880.

43. Ibid., pp. 59-61; Smiley, Denver, p. 625; Cruise, Early Days, p. 540 .

With them went a controlling interest in the Colorado Central, the Oregon Railway and Navigation Company, and several other 44 branch lines. This consolidation meant the rapid rise in the value of the Denver Pacific stock, of which Gould held a considerable part. Within the next few years he disposed of it at 45
a large profit.
While the eastern lines of the Union Pacific were being built up by consolidation, western lines were also being acquired and built. Control was secured of the Utah Central, the Utah Southern, and the Utah Southern Extension, and in 1881 these lines were consolidated as the Utah Central Railway, with Sidney Dillon (president of the Union Pacific) as president. The northern extension was constructed by the Oregon Short Line, chartered in 47 1881. By 1884 the line was completed to a junction with the Oregon Railway and Navigation Company at Huntington. These lines formed the Union Pacific connection with the northwest, and were able to afford competition to the Northern Pacific, which had been opened the preceding year.

The Oregon Steam Navigation Company was oreanized in the early sixties to afford communication along the Columbia River by a system of steamships, supplemented by railroads around the un-

49
navigable portions of the river. This plan was followed literally, and afforded practically a monopoly of transportation over 50
the territory involved. During the middle seventies a German, Henry Villard, came over in the interest of German bondholders of 51 other small railroad concerns in Oregon. Being able to come to no satisfactory arrangement, and becoming interested in railroad projects, he began to take an active part in railroad affairs and to assume the control of the companies in which he was in52 terested. He saw the strategic necessity of the line of the Oreson Steam Navigation Company for any company wishing to control the territory, and so went to Gould to get aid for his plans. An agreement was reached whereby Villard was to acquire the Oregon Steam Navigation Company and build to a connection with the Union Pacific by means of a construction company, half controlled by the Union Pacific. Gould eventually backed out, and the Ger53 man bondholders requested to be relieved of their holdings. To meet this situation, Villard formed his own corporation, bought out both the German bondholders and the Orecon Steam lavigetion .

Company, which feared the possible building of a branch of the Union Pacific, and formed the Oregon Railway and Navigation Company to consolidate the property of the Oregon Steam Navigation 55 Company and the Oregon Steamship Company. The Union Pacific hod an interest in the new company, and the two roads were even56 tually connected at Huntington in 1884.

With Villard's new combination, and the beginning of his line to connect with the Oregon Short Line, it seemed for the moment that he had complete control of the northwest. Just at this time a new and disturbing factor entered the range of possibilities. The Northern Pacific, which had almost ceased to exist during the middle seventies, began to show signs of revival. After being reorganized, work was once more resumed in 1879 under 57

58 president Billings, and reached the Dakota-ilontana line in 1880. At this point Villard began to get alarmed, because if the road were completed, as seemed probable, it would entirely destroy his control. He suggested an agreement between the lines, but could get nothing from the Northern Pacific except a promise to use the Orezon Railway and IJavigation Company's line until its own wes 59
completed. Then he tried buying stock, but his own resources

proved insufficient. In his extremity he formed a "blind pool" to meet his needs - the project taking this form in order to avoid publicity. Under his system of "blind contributions Villard secured funds sufficient to buy a controlling interest in the 60 Northern Pacific. A holding company was organized in 1881, under the name of the Orecon and Transcontinental Company, and 61
it was vested with the control of both roads. Under this control the Northern Pacific was finally completed in 1883, extending from Duluth to a junction with the Oregon Railway and Navi62 gation Company at Vallula. The St. Paul and Northern Pacific was acquired in order to give a direct line to St. Paul.

The operations of Villard were more spectacular then sound, appealing particularly to the speculetive interest of the day. When the financial depression came in the latter part of 1883 it was found that the organization which he had built up was topheavy and not able to support its own weicht. Consequently Villard was forced to resign, and the Oregon and Trancontinental 64 Company was broken up. Villard still retained some influence in the Northern Pacific, but no loner held an executive office. Control of the Oregon Railway and Navigation Company was secured

by the Union Pacific, eventually forcing the Northern Pacific to 65
build its own line to the coast.
A summery of the completion of transcontinental lines during the years of 1881 to 1884 shows the extent of their activity. The Southern Pacific had completed and consolidated its own line frwom San Prancisco to New Orleens; the Texas and Pacific had been completed to a junction with the Southern Pacific at El Paso; teh Santa Fe and been completed to a junction with the Southern Facific at the lieedles, and to guaymas on the Gulf of California; the Denver and Rio Gronde had been completed from Denver to Ogden; the Union Pacific had constructed a branch from Ogden to a connection with the Crecon Railway and Navigation Company, which in turn gave a route to the coast; the Northern Pacific had completed 66 its main line. The large majority of this mileage had been built in the latter seventies and early eighties, and all the lines were completed within a few years. At no other time in the history of western railroad construction has such a charecteristic been evinced.

The most visible result of the forecoing construction is to be seen in its effect on the population of the west. Up to 1880 each succeeding census showed a fairly definite population
64. Villard, Vol. 2, p. 316.
65. Ioid., p. 316; Bancroft, orecon, Vol. 2, p. 748.
66. During the same period the Canadian Pacilic was beine built. It was finished in 1885.
frontier in the United States. With the completion of this group of transcontinental roads and the rapid "spraying" of the population into the west, this condition began to change. Now one part of the west was almost es easily and quickly reached as any other. The result was that by 1890 the frontier was a thing of the past. The frontier, which hed been continually moving west, absorbing nearly all of the land as it went, suddenly disapeared, and in its place came a diffusion of population over the entire west, with thickly populated comnunities occurring where mining or agriculture was perticularly good, rather than in close connection with earlier settlements.

As an illustration of the influence of the railroads
upon the west, and particularly upon the frontier, the history 68 of the cattle business is excellent. Up to the end of the Civil War practically all cattle to be used for food vere raised, butchered, and sold locally. About thet time it was found thet the numerous herds of wild Texas cattle could be fattened into marketable form by driving them north over the public domein, allowing them to feed along the way end to winter in the north. After
67. The population charts in the Census reports present this frontier in a convenient, visible form.
68. F. L. Paxson, "The Cow Country," in Americen Historical Peview, vol. 22 (l917), p. 65-83, is a very excellent account of the oricin, erowth, and disappecrance of the "lone drive" J. G. VcCoy, Historic Sketches of the Cattle Trade of the West and Southvest (Kinsus City, inssouri, j.874) is a rether diffuse account of the ecrly history of the Texas cettle business, vritten by a a woman, end interspersed with much reminiscence.
this fact was ascertained, continually increasing number were driven north every year, and throughout the seventies this busi69
ness expanded rapidly. During the seventies the western states of Kanses, Nebraska, Colorado, and Wyoming were very thinly peoled and the business inconvenienced no one. The newer railroads of the period - the Missouri Pacific, the Nissouri, Kanses end Texas, the Union Pacific, and the Santa Fe tapped the trade and 70 were thus given an added impetus, winile also aiding the business. At the same time settlers were coming in ever increasing numbers. The completion of the through lines in the early eichties produced a climax. The settiers, who filled up most of the land in the nei ghborhood of the railroads, objected strenuously to having the herds driven over their fields. liuch of the ground was fenced, and the herders, who had been forced further and further west, found it almost impossible to secure grazing for their stock.

While the land was being settled at the expense of the cattle business, foreign nations were becinning to feel the pinch of American competition, and to meet it by the use of quar ntine. It is doubtful whether the agitation against Texas fever and similar diseases was well founded, but at least it gave the stetes a basis for stopping the "long drive". During 1885 Kansas and Colorado both passed quarentine laws which were so strict as to amount

[^0]to a prohibition. Wyoming, Nebraska and New Nexico had similar laws, but the first two states, beceuse of their location, put 71 an effective stop to the "long drive". The remainder of the story - the new development of the cattle business, the use of specialized equipment on the railroads, and the newer methods of preservation and storage belong to a later period. The cattle men tried to restore their old business by an appeal to ConEress for a national cattle trail, but the project was never re72 garded very seriously.

The lines centering at Chicag̃o also continued to expand from 1873 to l884. The dominant cheracteristic was the multiplication of branch lines between the Iississippi and Irissouri Rivers in order to bring a lareer amount of territory under the control of each company. This kind of railroed advance was just as necessary for the economic development of the country as the completion of the trunk lines, but it lacks the spectacular appeal, and can somewhat be taken for granted. A general tendency toward consolidation is also noticeable; this tendency should not be over-ststed, because it was the very normsl result of rapid expansion, and tended to produce more efシicient service rather
71. J. Nimrno, Jr., Peport in Regrad to the Renge and Rench Cattle Business (Washineton, 1886) Gives the most cietailed account of the business at its widest extent, and of the factors which led to its abolition.
72. The report of Nimmo, referred to above, was made by the Chief of the Bureau of Statistics of the Treasury Department, and favored such a trail (p. 3l).
then monopoly control. The cry of monopoly which was continually raised against the railroads was more an additional argument to support the economic panacea of regulation than anything else. A brief survey of the more important railroad lines during the period will suffice to show the general tendency.

The St. Paul and Paciric laid the basis for its future expansion during this period. It was at this stage that James $J$. Hill began to become an important figure, organizing a company for the purchase of the St. Paul and Pacific. The transaction was concluded in 1879, and the road became the St. Paul, Minneapolis and Manitoba, with George Stephens of Montreal as president 73 and J. J. Hill as general manager. Both the stock and bonds were acquired at 2 very low fieure. In 1880 several local lines vere 74 bought, and connections were made with Fargo and Grand Forks. By 1883 two lines had been completed to the Canadian border - one through western Minnesota to St. Vincent and the other through eastern Dakota to Neche, while the provosed transcontinental division had been completed to Devil's Lake, a little over one-third 75 the way across Dakota. During the same year J. J. Hill became president, end was placed in a position where he could carry out his plans for a transcontinental road within the next decade,

The Chicago, Milwaukee and St. Paul was at a standstill for the five years imnediately succeeding the panic of 1873 . Construction on the line west from Hastines, Iinnesota was resumed in 1878 , and the following year was completed to Ortonville, near 77
the Dakota boundary. During the same year the line from North McGregor was finished to Marion Junction, just north of Yankton, and the Davenport line to Fayette was added. In 1880 the line from La Crescent along the river to Clinton, which had been built in the early seventies by two independent companies and united as the Chicago, Clinton, Dubuque and Ninnesota, was added; the NcGregor-Marion Junction line was completed to Running Water and Nitchell; the Davenport-Fayette line was completed to a junction with the main line at Calmar; the La Crosse line was completed to 80 Flandreau, Dakota. The line west from North McGrecor was com81
pleted to Chamberlain in 1881, and the line from La Crosse to 82
Woonsocket was finished in 1883; the Sabula-Omaha line was also completed in 1883; this line had originated as the Sabula, Ackley and Dakota and had been aided by the Chicago, Milwaukee and St. Paul in order to make competition for the Chicago and Northwest-

83
ern.
In 1873 it was completed to líarion, near Cedar Repids, 84 and operated by the Western Union Division of the St. Paul. Work was begun again in 1881, and the road was completed to Omaha 85
by 1883. Thus by 1883 we have three main lines of the St. Paul pushed as far as they were to be constructed before 1900 - La Crosse to Woonsocket, North McGregor to Chamberlein and Running Water, with branches to Sioux Falls, Yankton, and Sioux City, and Sabula to Omaha. The Hastings line had been completed across Minnesota, and the Kansas City line was not as yet started. Two north and south lines had been completed - St. Paul via La Crescent, North McGregor, and Sabula to Clinton, end St. Paul vie Austin and Calmar to Davenport.

The Chicago and Northwestern also did practically nothing from 1873 to 1879, when it acquired its line from Ancs to Des 86
Ioines. The year 1880 saw the real reopening of active operations; the Winona line was opened to Watertown, and a branch was 87
built from Huron to Pierre, Dakota. In 1881 this branch was 88 continued from Huron north to Redfield, and the following year 89
the Watertown line was extended westward to that point. By 1883 the line from Iriquois (on the Winona-Pierre line) via Hawarden

Eagle Grove had been completed to Ames and Des Noines. The western extension of the Chicago and Northwestern was built by the Fremont, Elkhorn, and ITissouri Valley, which was chartered in 1869 by J. I. Blair, who was then the chief figure in the Chicago and Northwestern. Ten miles were built in 1869, and by 1871 it had been completed from Missouri Valley to Wisner. Work was not resumed until 1879 , and by 1882 the road was complete to Valentine, being operated in conjunction with the Sioux City and Pacific. The largest single acquisition of the Chicago and NorthWestern during the period was the former St. Paul and Sioux City. The Chicago, St. Paul, Hinneapolis and Omaha was formed in 1880 by the consolidation of various lines, including the St. Paul and Sioux City, in order to produce a through line from Chicago via 95
St. Paul to Sioux City. Late in 1882 the Chicago and North96 western secured control, Larvin Hughitt became president, and the following year the line was made a part of the Northwestern system 97 proper.

The Joy roads, with the Chicago, Burlington and Quincy as

a part of the Burlington system the following vear, thus giving the C. B. and \&. a main line from Chicago through Burlington and Omaha to Denver, one from Chicago through quincy to Kansas City and southern Kansas, and direct connections between Omaha and Kansas City, as well es the majority of a direct line from Bur105 lington to St. Louis.

The Chicafo, Rock Island and Pacific was not very active during the period. In 1878 it acquired the line od the Keokuk and Des :Ioines between Keokuk and Des $\mathbb{H}$ oines, and a few branches were built in the early eighties, notably that from Camer on Junc206
tion to Kansas City. From 1883 to 1887 there wes no construction of any kind.

The Illinois Central was also inactive, and did not perform any construction west of the Inississippi from 1873 to 1886 .

The growth of the Gould system in the southwest was possibly the most interesting developnent of the early eishties, As had before been mentioned, Gould first became interested in the Union Pacific, and through its consolidation in 1880 with the Kansas Pacific end Denver Pacific, had become heavily interested in all three. While this interest continued, Gould cradually transferred his activity to other roads which he had acquired incidentally in his fight in the Union Pacific - namely the lisissouri
105. Ibid., Jan. k886, py. 324-337.
106. Ia.R.R. Comin. 1879, p. 104; Traveler's Guide June 1883, pp. 220-223. The Kanses City brench was onened in 1884.

Pacific, the Kons:s Central and the Central Branch of the Union Pacific.

Gould was primarily a financier, and was interested more in the financial manipulation of the various roads than in their sound building and operation. He dreamed of a complete railroad empire in the southvest, which would have a practical monopoly of the whole recion, and in the four years between 1879 and 1883 se107 cured control of the lines which would make this dream possible. Along with the IIissouri Pacific he secured a half interest in the Atlantic and Pacific, which had a right of way and land grant from the fissouri boundary throuch Albuquerque to the coast; then he secured the Texas and Pacific, which had a richt of way and land grant from Marshall, Texas through El Paso to the Pacific. North and south lines to make connection with the Gulf were secured in the Missouri, Kansas and Texas and the St. Louis, Iron Yountain and Southern, Eastern connections were made by means of the Wa-bash, St. Louis and Pacific, formed by consolidation in 1879 under 108
Gould's direction. All of these trunk lines, besides nuncrous branches, were accuired in the years between 1879 and 1833.

Two of the Gould lines have already been discussed. The Atlantic and Pacific was completed from Albuquerque to a junction
107. For references for his acquisition of the Atlantic and Pacific, the Texas and Pacific, and the St. Louis, Iron irountain and Southern, see preceding discussions of these roads.
108. Mo. R. R. Comm. 1879 and 80, p. 39 ; Coldwell and Livingston Counties. p. 8:j6; Wyandotte County, p. 229; Randolph and Eacon Counties, p. 322.
with the Southern Pacific at the Needles. The line was operated jointly wit: the Santa Fe, with which the Missouri Pacific made a junction at Witchita, Kanses. The Texas and Pacific was completed to Il Paso to a junction with the Southern Pecific, and a traffic agreenent between the two lines furnished an equitable distribution of business.

The old Northern Missouri Railroad hed been foreclosed in 109 1871 and bought in 1872 by the St. Louis, Kansas City and Northern. In 1879 it was bought by Gould and consolidated with the Wabash 110
Railway of Ohio to form the Wabesh, St. Louis and Pacific. With the building of a line to Council Bluffs in l880, this acquisition gave the Gould lines a second route via Moberly to Kansas City, with connections to Council Bluffs, and also a through line from 111
Kansas City via Moberly and Ottumwa, Iowa to the east. A branch 112
to Des Moines was finished in 1883.
The Missouri Pacific, around which the whole system was built, had been foreclosed in 1875, by which means its lease to 113
the Atlantic and Pacific was dropped. In 1876 it was sold to
James Baker who conveyed it to the i.rissouri Pacific Railroad Com114 pany. Control was secured by Gould in 1879, and in the following year the line was consolid:ted with half a dozen branches to form 115
the Lissouri Pacific Railway Company. A considerable number of

branches were built by 1883, two of which recuire particular mention. Up to 1881 the Gould lines did not enter Omaha, so in that year roads were organized in Kans:s and Nebraska to build a line from Kanses City. The entire road was opened in 1882 and 116 the companies consolidcted. The Atchison and Pike's Peak Railroad was incorporated in 1859 to succeed the Atchison and Ft. Riley 117 (chartered 18.57), and to run almost due west from Atchison. Aided by the Pacific railroad land grant bill it became the Central 118
Branch of the Union Pacific in 1866, and by the end of 1868 was 119 completed to Waterville, where it stayed until 1877. It resumed building in 1877 and by 1879 it was open as far as Kirwin (247 120
miles), and was bought by Gould, who included it in the Irissouri 121
Pacific system the following year. By 1883 it had reached Lenora, 293 miles west of Atchison.

The Missouri, Kans:ss and Texas was leased to Gould in 1880 and Eave a line from Hennibal through Sedalia and Vinita to Denison, with a branch in Kansas from Parsons to Junction City, and 123 branches in Texas from Denison to Gainesville and Greenville. By 1883 it had been built to Dallas.

The St. Louis, Iron Nountain and Southern was formed in 1874 by a consolidation which included the St. Louis and Iron Ioun-

tain and the Cairo and Fulton, and gave a through line from St. Louis to Texarkana. The whole line was leased to the lifissouri Pacific in 1883, by which time numerous branches had been aided, 125 although not any that were perticularly significant.

Transcontinental commication via the St. Louis, Iron Nountain and Southern was made by a connection with the Texas and Pacific at Texarkana; connection with the Gulf was made over the International and Great Northern, acquired in 1883, which included a line from Longview (on the Texas and Pacific) to Houston, 126
and from Palestine to Laredo. Entrance to Galveston was made through the control of the Galveston, Houston, and Henderson, extending from Galveston to Houston.

Two or three other inportant lines might be mentioned at this point. When the Atlantic and Pacific went into bankruptcy in the early seventies its interest in the South Pacific was 127
bought (1876) by the St. Louis and San Francisco. This sale gave the St. Louis and San Francisco the portion of the line in Missouri (St. Louis to Vinita), that hed been built by the Atlantic and Pacific. After Gould had used his hold on the Atlantic and Pacific to force the Senta Fe to give him a favorable traffic agreement, he disposed of his holdinds to the St. Iouis and San Francisco, which completed the road from Vinita to Red

Forks, with branches from Peirce City to Histead Kansas, and 128
from Monett to Ft. Smith, Arkensas.
The Chicsgo and Alton was built in most part by the Kansas City, St. Louis and Chicago, chartered in 1877, begun in 1878, 129 and leased in perpetuity to the Chicago and Alton. It was completed in 1879 to furnish a continuation of the main line of the C. and A. from Louisiana to Kansas City, with a branch to Jeffer130
son City.
The Little Rock and Fort Smith was reorganized in 1874 132
and completed in 1876. The Fort Worth and Denver City, chartered 133134
in 1873, was able to begin construction in 1881, and by 1883 had reached Wichita Folls, 114 miles west of Fort Worth. This road was responsible for practically all of the town in northwest Texas along its route. The Gulf, Colorado, and Santa Fe, chartered 136
in 1873 to furnish Galveston with a second railroad line, was be-
gun in 1876, and by 1883 had reached Ft. Worth, with branches to 138
Houston and Dallas.
The result of the rapid railroad construction of the latter seventies and early eichties forms an interesting parellel to

the conditions a decade earlier. Instead of constructing and consolidating their lines through the first tier of states, the roads did the same thing with their lines into the second tier of states, and with the lines making Guif and Pacific connections. The process was similar, the effect on retes was about the same, and the reaction of the people was practically identical. Just as in the previous case, the period was ended by a financial stringency, and marked with local restrictive legislation. The first anti-railroad agitation had produced a considerable amount of regulation, but the second wave of feeling had probably even a wider effect. Briefly sunmarized, the results were as follows, - Einnesota added a Warehouse Commission to the Railroad 139
Commission in l885; Iowa established a railroad comassion in 140

141
1878; Arkansas repudiated her railroad debt in 1885; Texas re142
pealed all her land erant laws in l882; Kansas passed her first 143
railroad regulatory act in 1883 ; Nebraska established a railroad 144 145
comission in 1885; Dakota did the same;Colorado had an extensive 146
investigation of railroad rates in 1885 and the same year passed 147
her railroad comission law; Oregon passed her first restrictive 148

149
legislation in 1885; California created a commission in 1880 ac-

cording to the restrictive constitution of 1879, and during the years 1883 to 1886 the trouble between the commissioners was in151 dicative of the generel interest in the railroad question. The majority of this legislation came toward the end of the period, and immediately after the peak of railroad construction, that is from 1882 to 1885 , acain paralleline the conditions of the seventies. ITo states made constitutions during these years, with the possible exception of California in 1879, winch is almost too early to show the anti-riflocd feeling at its height. Even here, the constitution provided for the very strict control of the rail152 roads.

An interesting development of the period was the growth of national cooperation among the state railroad commissioners. During the Granger agitation the new railroad comissioners were compelled to travel into neiçhboring states whenever possible in order to get some idea as to how their duties could best be performed. It is very easy to trace the relations between the lews passed in the various Granger states during the seventies, and it is also easy to find the same relstions in the railroed com-
150. Constitution of California 1879, Art. 12, Sect. 18.

1£l. The fight was between . W. Foote, who claimed the other connissioners were unduly influenced by the railronds, and Carpenter and Humphries. See Cal. R.R. Comin. 1883, pp. 99-150; 1884, pp. $3 \mathrm{ff}$. ; 1885, pp. 9-11. Foote seens to have been in the richt. They all lost their places in the next election.
152. Buck, Granee Lifovent, p. 198. The Kearneyite or Working an's Party was in control, and strict reculation of railroad as pell as provision for a railrocd comission, was provided for in the constitution. The feeling at the time was very high, but did not last.
missions and the wy in which they carried on their work. By the latter seventies enough states had reilrosd commissions so that it was found profitable to hold annual national meetings in 153 order to facilitate the exhenage of ideas. The Massachusetts comnission, under the leadership of C. F. Adams Jr. was particularly active, and the influence of Adams' ideas can be discovered in 154 the work and reports of most western railroad com issions.

As at the time of the Granger movement there was also a reflection of popular agitation in Coneress. The actual regulation of the reilroads by some kind of government action was talked about, but not very seriously. It was felt the.t accordiñ to all precedent, the situation should be met by the states individually. This feeling changed rapidly in the several succeeding years, but seemed securely dominant in 1884. The main direction which national acitation took was toward the forfeiture of the unearned railroad land grints As has been shown, the frontier vas beginning to disappear durine the early eighties, while at the same time lorse amounts of land were reserved from settlement in order to fill land שrants such as the Atlantic and Pacific and the Texes and Pacific, which in all probability would never be built. This situation was closely linked with the fear of the control of lerge portionz of the public domain by feoricn capitalists, and the acitation ageinst biet business and monopoly. The Anti-nonopoly party

1:33. One of the first meetings was at Columbus, Ohio in 1877.
104. The Interstate Commerce Commis.iion took the lead after its establislment in 1887.

Was the first national party to take a definite stand for the 155
forfeiture of the unearned land grants, but it was soon followed by both the Republican and Democratic parties, which came out very 156 definitely on the same ground in 1884. No legislation had passed Congress prioer to 1884 , but the increasing agitation mede such action only a question of time.

When the financial stringency of 1884 occurred, the railroad system of the United States had the rouch outline which it vas to maintain. Nearly all the states that had a reilroad problem had passed restrictive laws, end national eritation had come to the point of action. The stace was set for the last act of the history of extensive reilroad construction and restrictive legislation, end the succeeding quarter of a century saw only a reacting of the same scene, with slichtly different stage setting.
155. N.Y. Times Sept. 14, 1882. Report of convention et Saratoca.
156. Eoth parties demanded the forfeiture of unearned railroad Erants and the reservatior of the public domain for actuel settlers.
